

# The City Growth

A lush green forest scene with a bright sunburst effect shining through the trees. The sun is positioned in the upper center, creating a strong lens flare and illuminating the surrounding foliage. The trees are dense and have vibrant green leaves. The foreground is filled with tall grasses and undergrowth, also bathed in the golden light of the sun.

Nature is the source of Man's life since ancient times. People lived in harmony with environment for thousands of years people and thought that natural riches were unlimited

The development of civilization  
increased man's harmful interference  
in nature

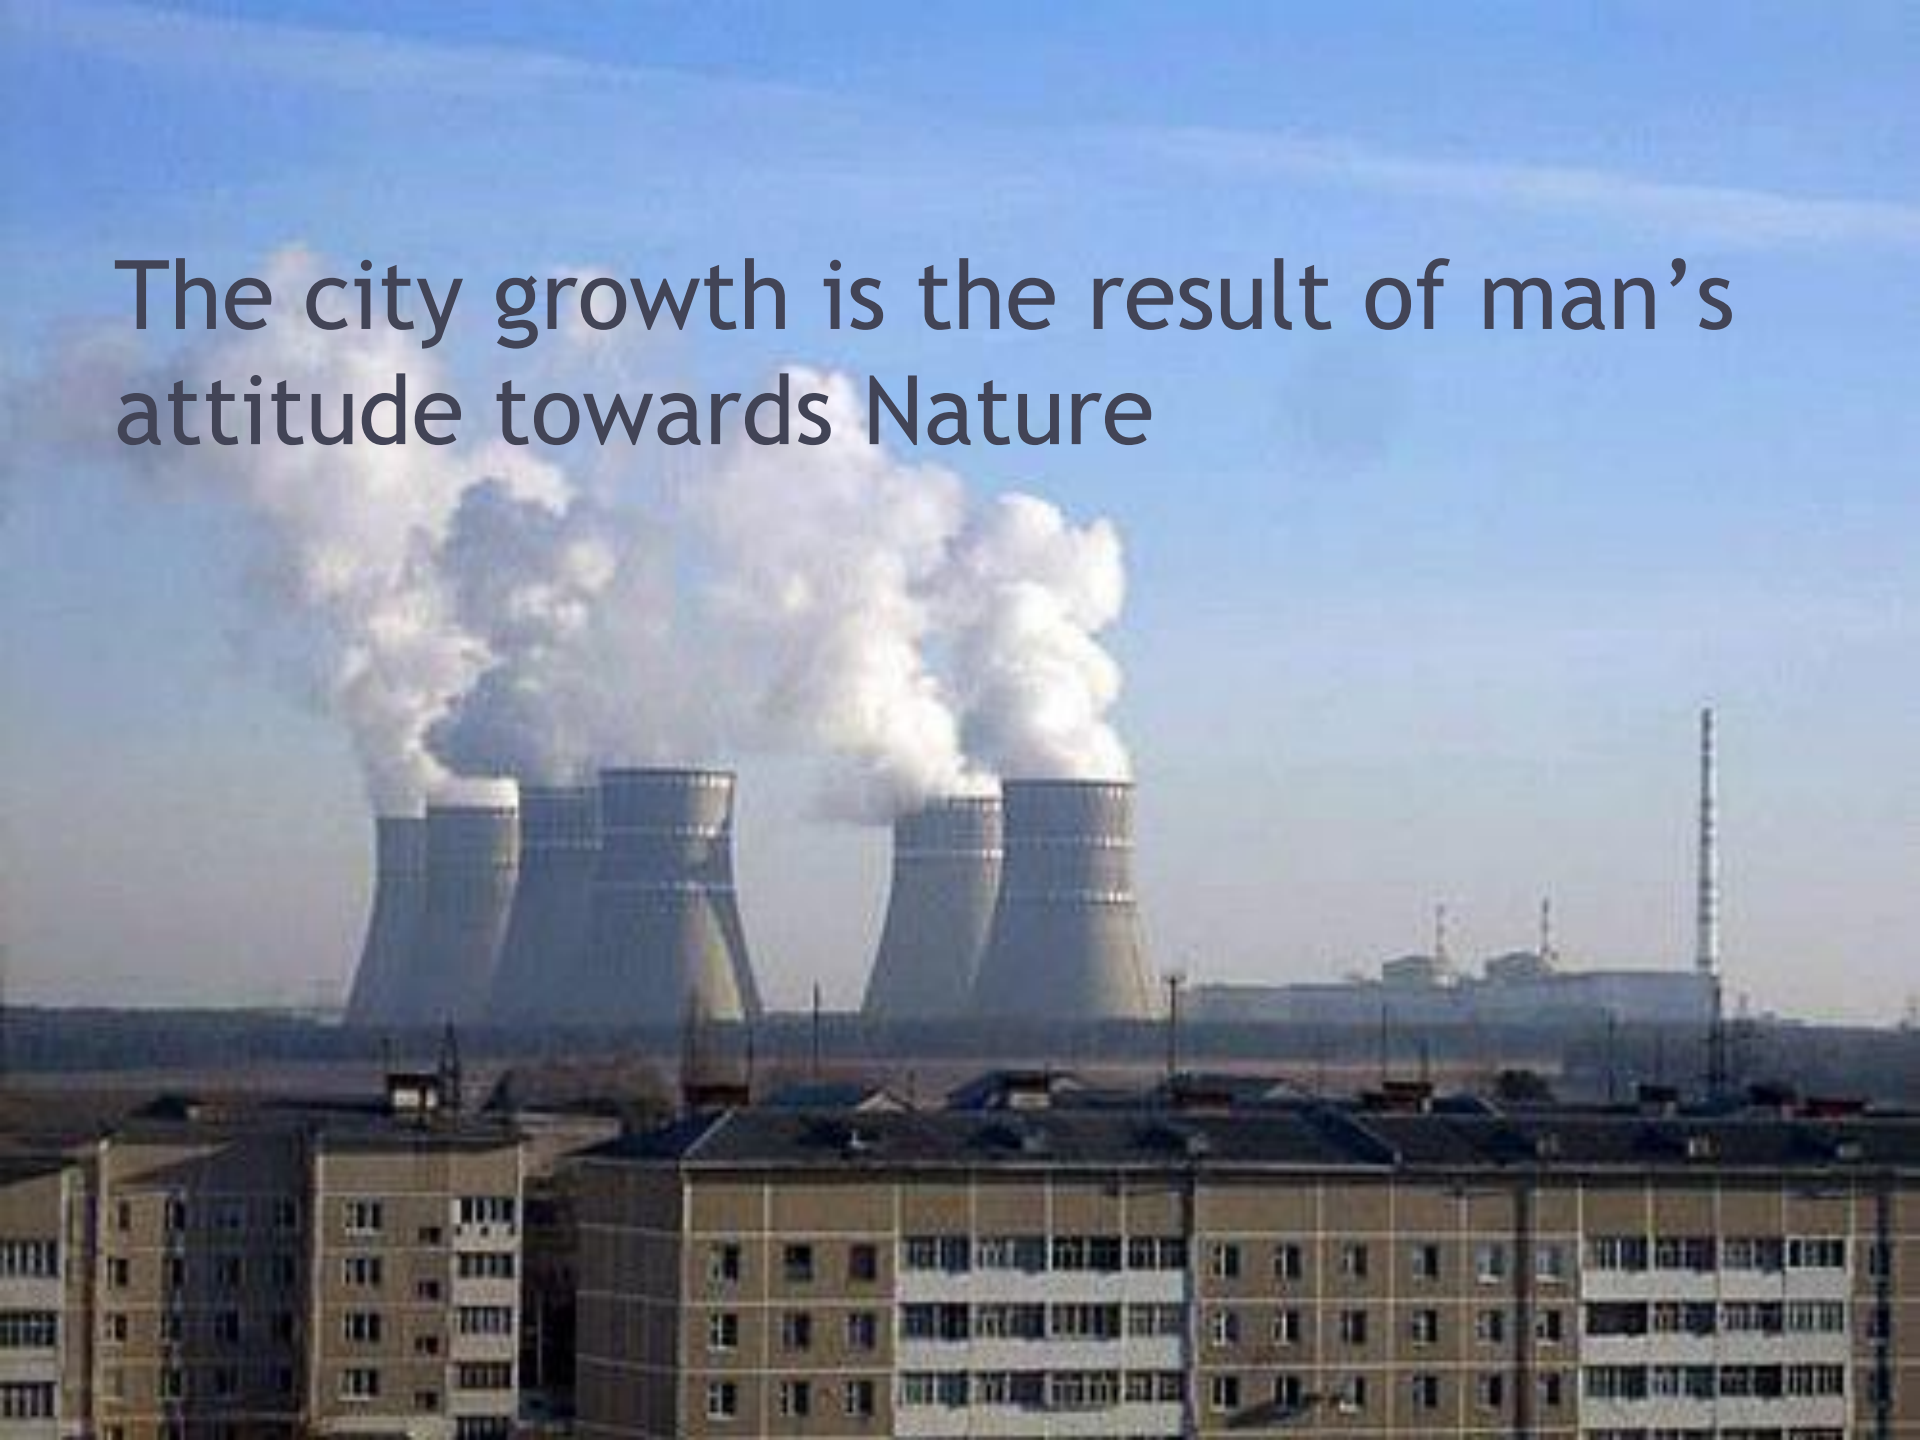

Large cities with thousands of smoky industrial enterprises pollute the air we breath, and the water we drink

Every year world industry pollutes the atmosphere with about 1000 million tons of dust and other harmful substances. Many cities suffer from smog

The city growth is the result of man's attitude towards Nature

The protection of the environment is a universal concern. We must be very active to create a serious system of ecological security
