

1C:ERP

Case study

Company description

- Company which produce tractors:
- Custom production
- Basic configurations
- Production on a warehouse

Scenario

1. When buying complex machinery, there is a concept of "configuration".
 - When ordering, you can specify the parameters of the tractor.
 - These parameters will affect the cost of the product and the production process.
2. Order production of a tractor under the client.
 - The customer's order for a tractor with certain characteristics.
 - Sales officer asks what parameters should be in the tractor and starts this option configuration in the system. Makes out the order of the client.
 - On the basis of this order, a production order is created and a tractor is produced for the customer.
3. Production to the warehouse.
 - Release of basic, running machines in advance to the warehouse according to the production plan. After receipt of the customer's order, this basic running machine is equipped to the specific customer and his wishes.

Product options

- As an option, you can order **leather covering of the seat**, interior and audio system with a subwoofer.
- **REAR ATTACHMENT** (OPTIONAL) - the rear three-point attachment of the CAT IV with a load capacity of 6,800 kg is available as an option. As an option, a Quick-Hitch frame can be installed to facilitate aggregation with mounted and semi-mounted instruments.
- **PTO** (OPTIONAL) - independent power take-off shaft, as an optional equipment, is driven by a multi-disc clutch, providing a soft start to the connected instruments. It will never fail, despite the complexity of the operations performed. PTO 1000 rpm with 45 mm shaft, 20 slots suitable for operations of any complexity.

How products are determined

☐ Specified in specification <Products are not specified>

☒ Specified in a product property: **Audio system**

The products specified in the property will be used for auto selection.
For example, you can create characteristics "textile cover" and "leather cover" for product "Sofa".
To produce a sofa with the "textile cover" characteristic, "textile" material will be used, while "leather" material will be used for a sofa with characteristic "leather cover".

☐ Specified in the manufacturing process

Information from the description will be available when specifying products.

How product characteristic is determined

Characteristic is specified on manufacturing.

1 out of 10 audio system

⚠ There are orders with a higher priority that require replanning. It is recommended that you plan them first as it may affect the production schedule of the current order.

☆ Planning settings

Plan More actions ▾

☒ Plan schedule

Material and equipment limits are taken into account while planning.

☐ Use availability reserve

☐ Plan model

One or several limits are ignored while planning. The schedule model allows you to evaluate the impact of limits to the product release time.

☐ Use availability reserve

Accept assumptions

☐ All materials in stock

☐ Unlimited equipment fleet

☐ Twenty-four hour operation without weekends (24/7)

☐ No other orders

Other settings

☐ Full replanning

☐ Discard manual changes of schedule

Plan the schedule of all stages that require recalculation except for stages placed manually.

Save and close Save More actions ▾

Supply type: ☒ Purchase ☐ Transfer ☐ Assembly ☐ Production

This fulfillment method allows you to generate purchase orders.

Description: Rostselmash: Purchase, 5 days

Use to work:

☐ With multiple suppliers

☒ With one supplier: BT Corporation

Planning parameters of this fulfillment method are applied to order from only one supplier.

Planning parameters: Order registration

Purchase period: 5 days

Purchase order fulfillment period. Allows you to determine the closest possible date for goods (package, works) receipt.

Order generation rule:

☐ Order when the order point is reached

☒ Order on schedule

"Order point" is the date by which the order must be placed to meet the demand.

Covered period: 10 days

Enables to limit the period demands of which shall be included in an order. Period is calculated in days (according to the warehouse work schedule) from the earliest day of possible supply against the order.

Guaranteed shipment period: 5 days

Used when goods (services) shipment date is calculated upon acceptance of orders to fulfillment. Set with margin in respect of order due date.

☒ Calculate earliest delivery date and shipment date when accepting orders to supply

Date of purchase order placement: 11/22/2019

Date of receipt against the order: 12/2/2019

Covered period until: 3/31/2020

Shipment date of the orders to supply: 12/2/2019

The earliest delivery date: 12/2/2019

Next delivery date: 3/31/2020

The order includes all demands of the period prior to the date of the next delivery.

 Group of product kinds: Products  Access group: Other 
 Description: Products without characteristics
 Details:

When printing a cargo name in the waybill, use:

☒ name from application settings: <none>
☐ individual name:

Product categories: Configured for this product kind [List](#)

☐ Characteristics: ?

☐ Series: ?

For this type of products you can choose **only** those series accounting policies, which include balance accounting by series. At the same time, if the warehouse is advanced for shipment or receiving, then the policy shall imply cost accounting by series.

Details

Description:

Rostselmash

Periodicity:

Month

▾

Display period:

☒ Range of dates

☐ Period number (within a year) ?

☒ Planning process management

For the scenario, the structure of plans is described according to the planning stages: the types of plans are divided into groups and ordered. Plans are created sequentially in stages through the assistant "Planning process management"

☐ Planning by assignments

Purchase planning:

☒ Only by quantity

☐ By quantity and amount

Currency:

▾

Sales planning:

☒ Only by quantity

☐ By quantity and amount

▾

Sales planning settings by product category

☐ Calculation by sales speed

If the check box in sales plan by categories is selected, you can specify sales ranking and speed of product sale.

The plan will be allocated to products considering ranking and speed of sales.

Production planning settings

☒ Calculation of demand for materials, work center kinds, and human resources

Demand for materials:

Optimistic

▾

Main materials are planned regardless of use probability, alternative materials are not planned.

Calendar:

Business calendar

▾

Detail plan by:

☐ Department

☐ Supplier

☐ Joint plan by suppliers

Requires supplier specification in each plan line

i To use the "Joint plan by suppliers" option, you need to select the option to fill by sources.

☐ Agreement

☐ Joint plan by agreements

Requires agreement specification in each plan line.
It is required if "Joint plan by suppliers" is set.

i To use the "Joint plan by agreements" option, you need to select the option to fill by sources.

☐ Warehouse

☐ Joint plan by warehouses

Requires warehouse specification in each plan line

i To use the "Joint plan by warehouses" option, you need to select the option to fill by sources.

☐ Assignment

Details by assignment are determined in the scenario

The selected details are used for filtering when filling in plans with actual data. For filtering when filling in with different plan type data, the details are used only by "Warehouse" and "Assignment".

How can I check indicators on a smartphone or a tablet?

The chart displays the average monthly exchange rates of the Russian Ruble (RUB) against the US Dollar (USD) and the Euro (EUR) from January 2015 to April 2015. The RUB rate against the USD shows a significant increase, peaking around 27,000 in March, while the RUB rates against the EUR remain relatively stable, fluctuating between 3,000 and 5,000.

Date	RUB / USD	RUB / EUR
01/29/15	11,000	6,000
01/30/15	18,000	3,500
01/31/15	18,000	3,500
02/01/15	18,000	3,500
02/02/15	25,000	3,500
02/03/15	27,000	4,500
02/04/15	26,500	3,500

Thank you for your attention!
