

Requirement and other information

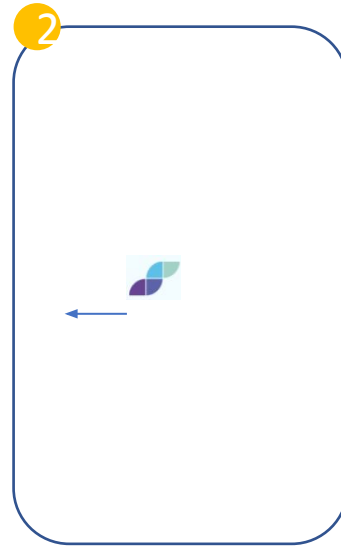

- Please visit the [Chrome store](#) to download the browser plugin and feel the UX. The iOS app should deliver similar and better experience
- Please visit <https://savyor.co> to get a sense of the overall branding aesthetic and colorway. Keywords: trust-worthy/smart/ease-of-use/minimalist
- Avoid multiple layers/clicks
- The design needs to accommodate to the latest iOS version to-date
- I would like the design to be high leverageable to be used on Android with as little required changes as possible
- Upon contract started, I will share assets used by the plug-in that you will use in the app design

App loading design

App loading

- Colorful sand dropping animation (from 2/5 of screen to middle) to form logo

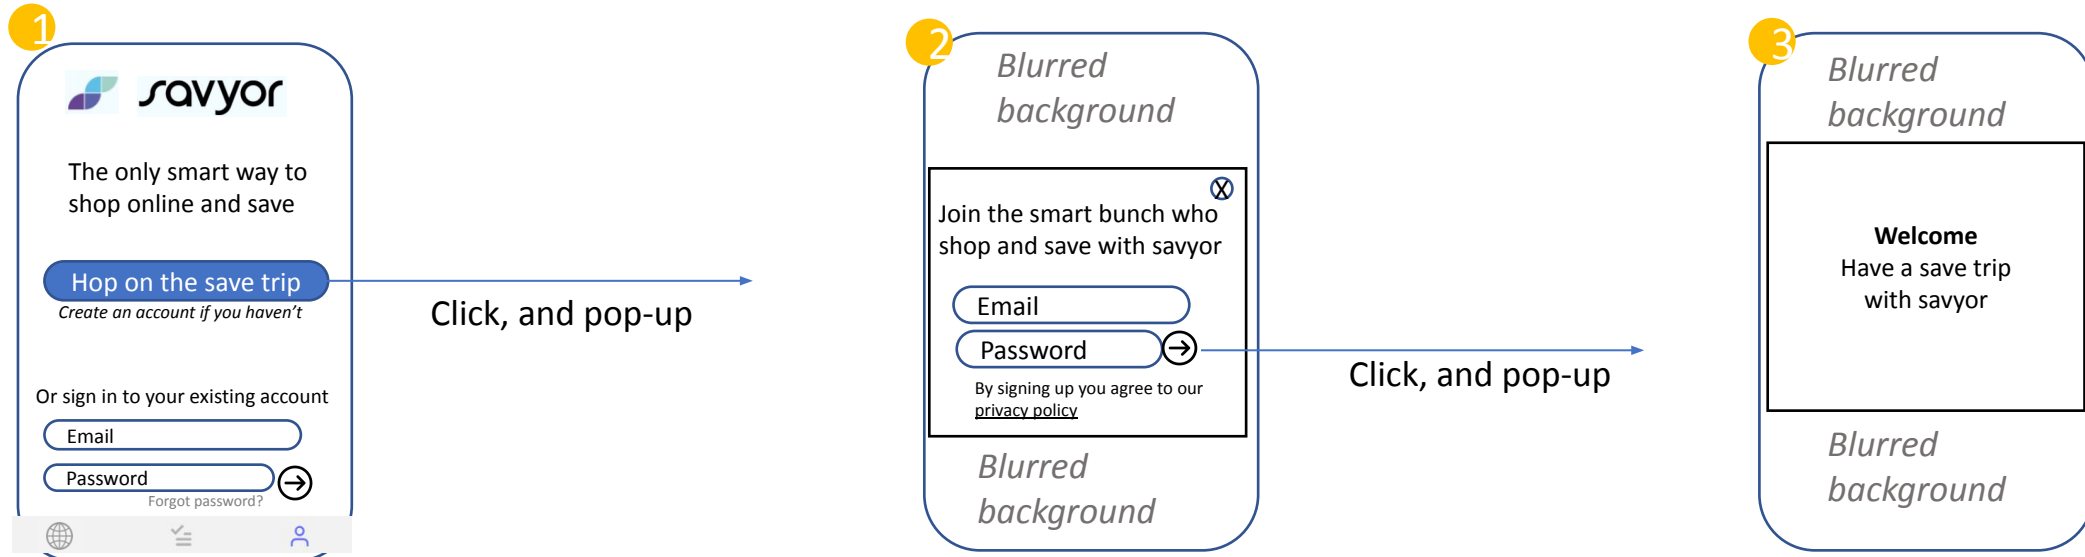

- Logo swiped left

- Text logo shows up
- Then jump to the main page

Main page, sign-up, and sign-in

Main page
(when not signed in)

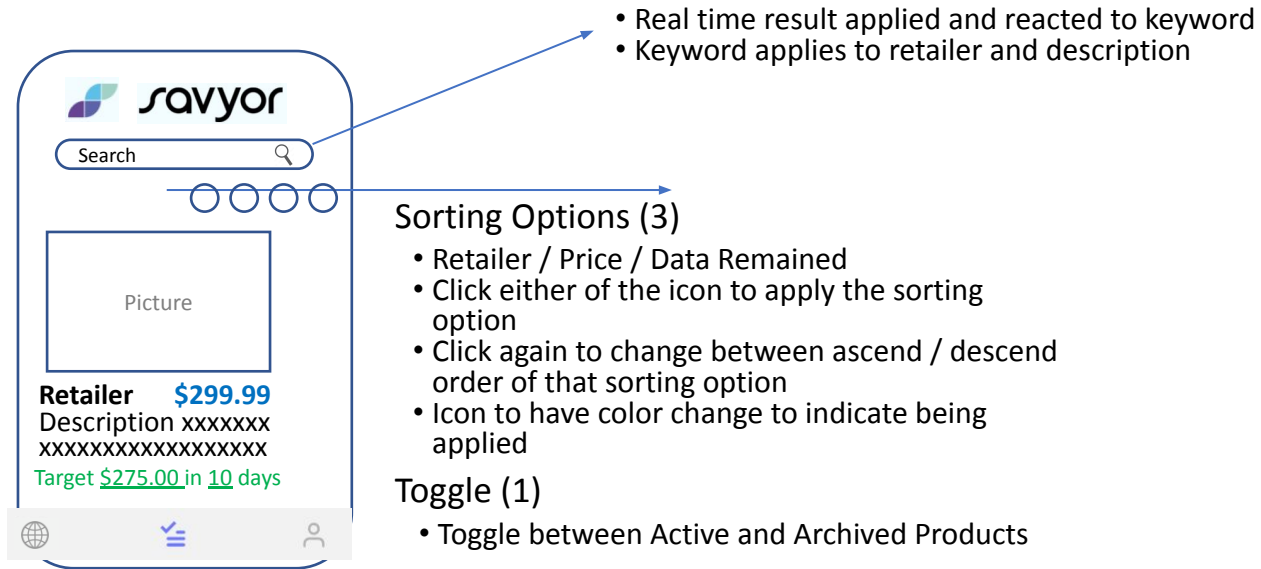

- Default main page for when user is not signed in
- When user navigate to input, native os keyboard will show up

- Background is blurred
- A pop-up box shows for account sign-up
- Privacy policy link opens native browser to the policy page (<https://savor.co/privacy>)

- Successful message shows up for 2 seconds, or when user touches the screen
- Then move to the signed in main page

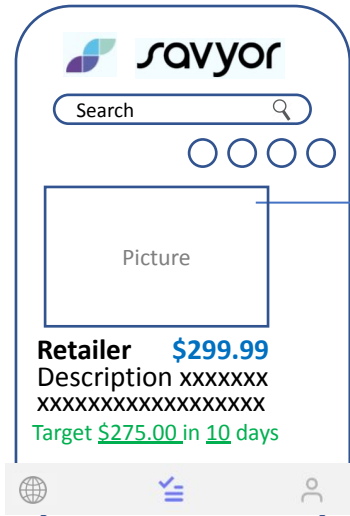

My list tab: main page (after signed in)

Main page (signed in)

- Picture and text enlarged to illustrate details
- Screen to fit 2 maximum 3 items horizontally. Clarity and user experience the deciding factor
- Target \$275 = Track Price
- 10 days = Track start date + track period – today date

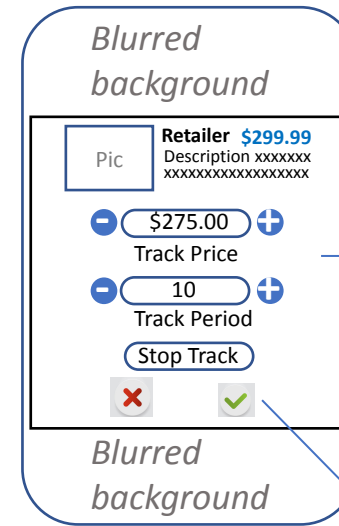

My list tab: main page: editing

Main page
(signed in)

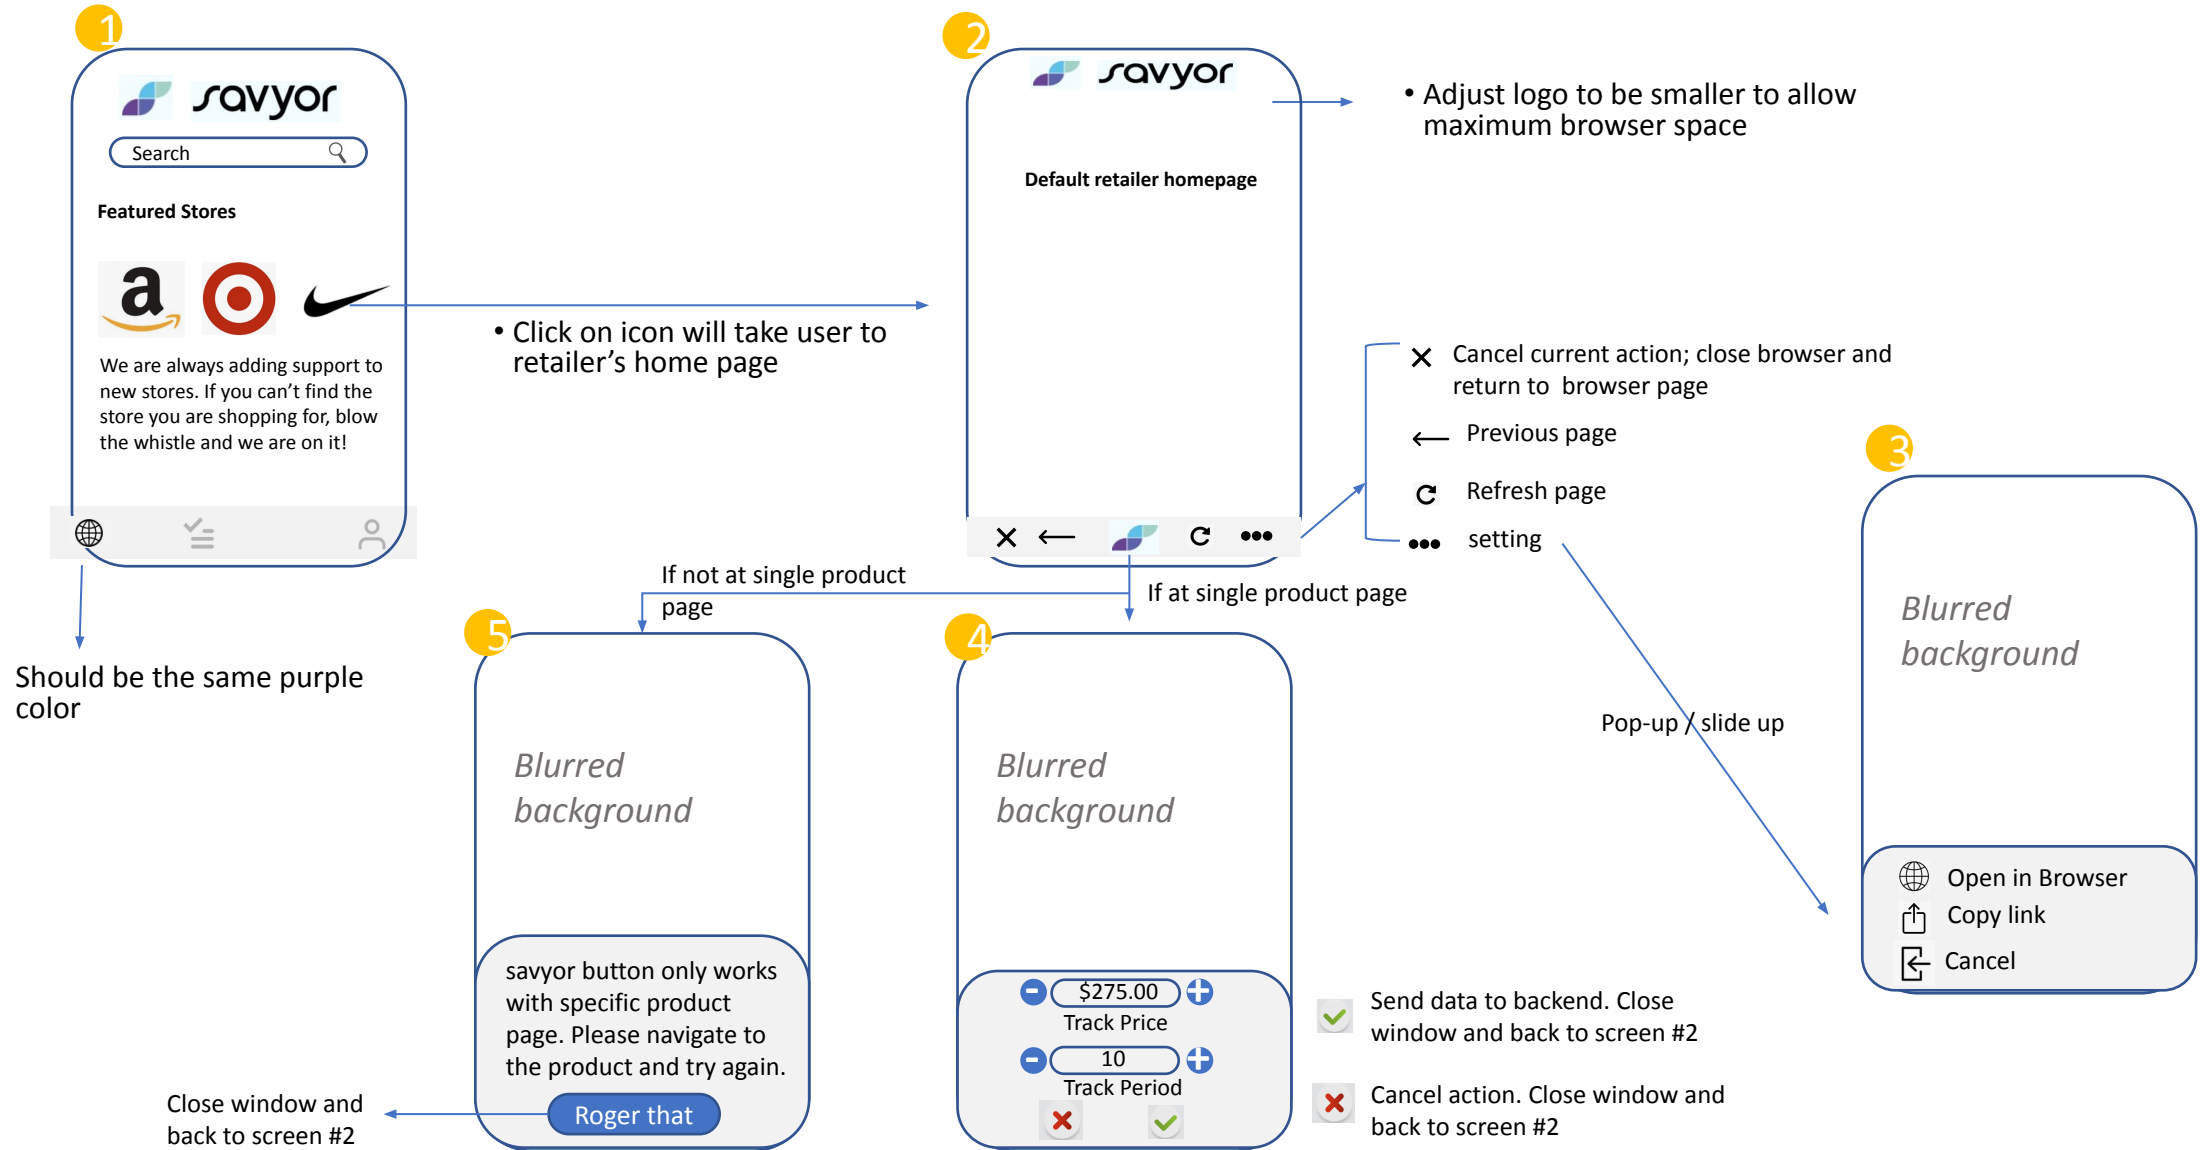

- Picture and text enlarged to illustrate details only
- Screen to fit 2 maximum 3 items horizontally. Clarity and user experience the deciding factor
- Target \$275 = Track Price
- 10 days = Track start date + track period – today date

- One Click on pic: open browser to the product page
- Long press on pic: pop up window to edit

- +/- change price at different scale
 - 0-99: 0.5 increment
 - 100-500: 1 increment
 - 500-999: 5 increment
 - 1000+: 10 increment
- +/- change period at 1 day increment
- Click into box would bring up native numeric keypad to input
- Track/Stop Track toggle: use color to indicate on/off
- Confirm save changes to backend; take user back to pre-edit page
- Cancel discard changes; take user back to pre-edit page

Browsing tab

Some good ios app
