

A photograph of medical supplies on a light blue surface. In the foreground, there is a silver stethoscope with a black tube. To its left is a spiral-bound notebook with a white cover and a pair of black-rimmed glasses. In the center, a white pill bottle is tipped over, spilling several yellow and white capsules. To the right of the stethoscope, there is a blister pack containing several small, round, light-colored pills. The background is a solid light blue color.

Medical education in the Czech Republic

Выполнили студентки 1
курса
Педиатрического
факультета
Нассонова Нина,
Данилевич Ксения,
Козюкова Олеся

Training lasts from 3 to 6 years. Teaching is conducted according to the Bologna system:

Bachelor's degree-BC diploma, 3 years of study

Master's degree-Mgr title, 2 years of study

Doctorate – title MUDr.

Czech universities offer a 6-year General medicine program, 5-year program of dentistry and 5-year pharmaceutical program in English and Czech. Training can also take place in English and Czech.

The cost of programs in English is lower than in some European countries. However, the quality of education does not suffer. In the Czech language foreign students can study free of charge.

First-year medical students study everything from Latin to surgery. There is no system for selecting subjects of interest, as in the bachelor's degree programs of many European universities. All foreign students are required to study Czech in their first year

You can choose an additional language already in the 2nd year: English, French or Spanish. In addition, in the 2nd year of study, in addition to the main program, you can additionally study several subjects. These may include courses on rare infectious diseases, medical history, and other subjects.

Most universities pay money for living expenses. Students who receive their first higher education are entitled to 700-800 kronor per month. Such financial support is provided only by state universities. For good studies, you can sometimes get a reward, in the form of a scholarship. Scientific experiments and research can also be encouraged. However, of all students, only 10% reach a sufficient level to earn it.

The Czech Republic is interested in specialists in the field of medicine. The state and hospitals themselves are making efforts to retain graduates and attract foreign specialists so that they do not go to work in other countries.
