Millions of vehicles and dozens of car models on the road are powered by Alango's advanced processing technologies for voice and audio. The automotive OEM and their supply chain partners have relied on Alango's expertise for many years.

The acoustic environment inside a car has unique challenges due to noise and reverberation. Engine, road, wind and rain noise can vary abruptly in amplitude and spectrum. Sound reflections from hard surfaces generate strong acoustic echoes with long echo tail. Alango's automotive solutions have been custom developed to overcome these challenges and provide
