

# Решение треугольников

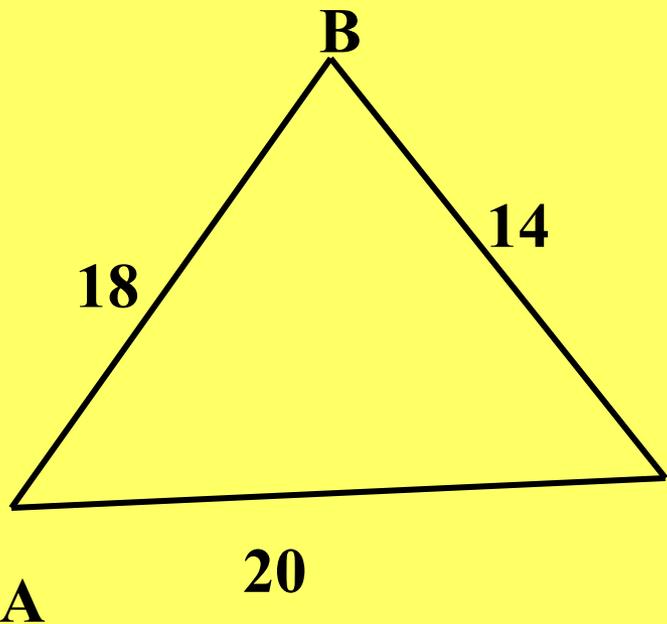

В науке нет широкой столбовой  
дороги и только тот достигнет ее  
сияющих вершин, кто не страшась  
усталости карабкается по ее  
каменистым тропам.

Дано:  $\triangle ABC$ ,  $AB=18$ ,  $BC=14$ ,  
 $AC=20$

Найти:  $\angle A$ ,  $\angle B$ ,  $\angle C$

Решение:

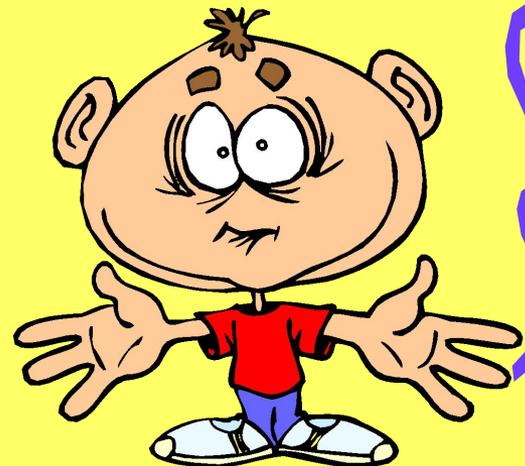

1) По теореме косинусов

$$AC^2 = AB^2 + BC^2 - 2AB \cdot BC \cdot \cos B$$

$$20^2 = 18^2 + 14^2 - 2 \cdot 18 \cdot 14$$

$$\cos B = \frac{20^2 - 18^2 - 14^2}{-2 \cdot 18 \cdot 14} = \frac{400 - 324 - 196}{-504} = \frac{5}{21}$$

$$\angle B \approx 76^\circ$$

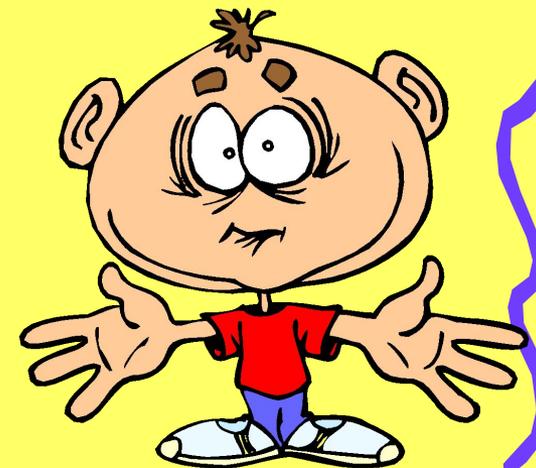

**2) по теореме синусов**

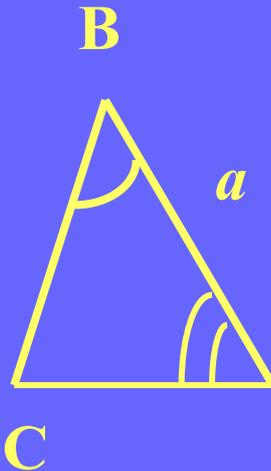

$$\frac{AC}{\sin B} = \frac{BC}{\sin A}$$

$$\sin A = \frac{BC \cdot \sin B}{AC} = \frac{14 \cdot \sin 76^\circ}{20} = 0,6792$$

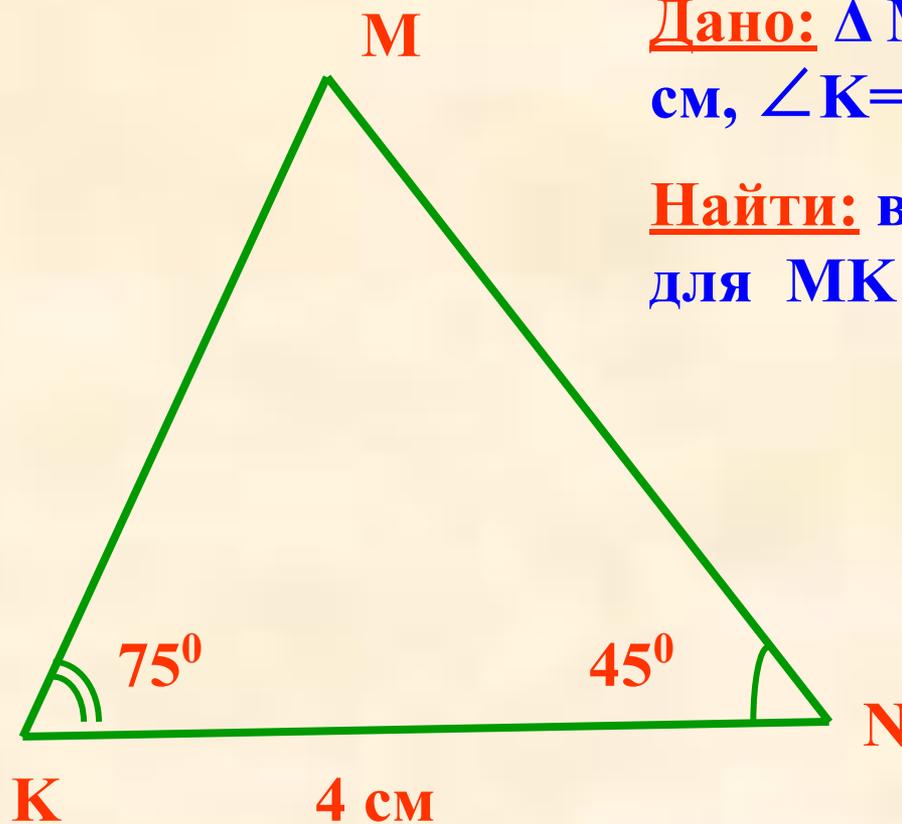

$$\angle A \approx 43^\circ$$

$$\angle C = 180^\circ - 76^\circ - 43^\circ = 61^\circ$$

## Задача 1

Дано:  $\triangle MKN$ ,  $KN = 4$   
см,  $\angle K = 75^\circ$ ,  $\angle N = 45^\circ$ .

Найти: выражение  
для МК

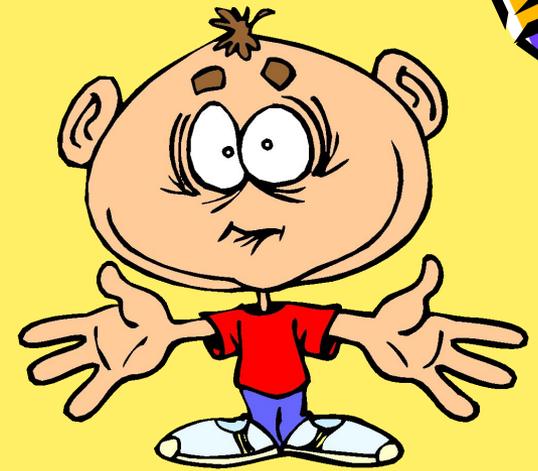

**Ответ:** 1)  $\angle M = 180^{\circ} - 120^{\circ} = 60^{\circ}$

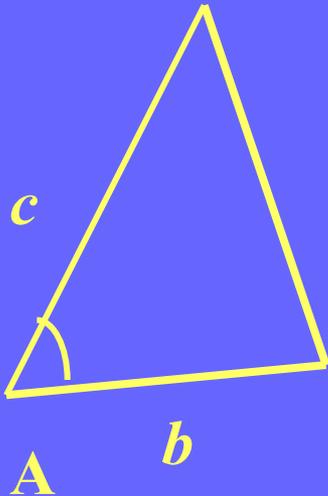

2) по теореме синусов

$$\frac{MK}{\sin N} = \frac{KN}{\sin M}$$

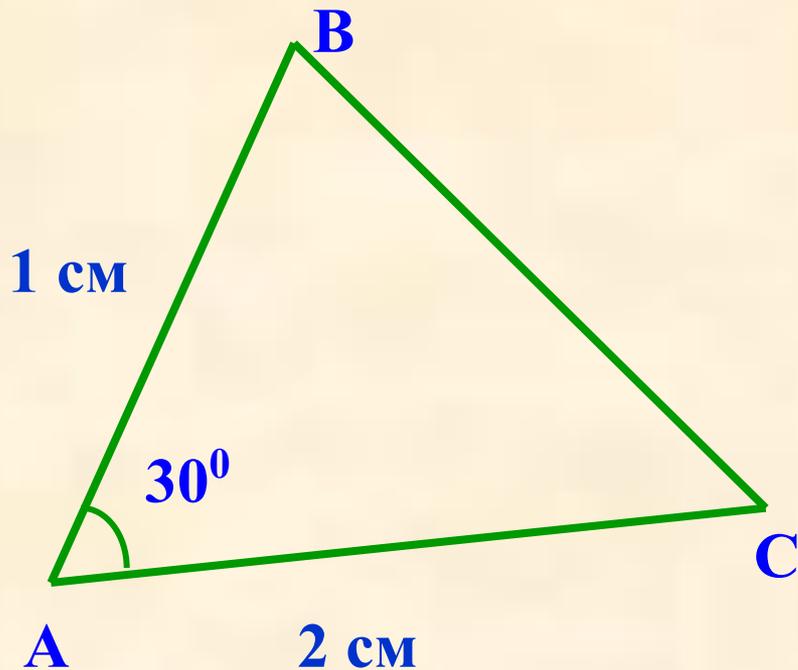

$$\frac{MK}{\sin 45^{\circ}} = \frac{4}{\sin 60^{\circ}}$$

$$MK = \frac{4 \cdot \frac{\sqrt{2}}{2}}{\frac{\sqrt{3}}{2}} = \frac{2\sqrt{2} \cdot 2}{\sqrt{3}} = \frac{12\sqrt{2}}{3}$$
