Elicitation Techniques

Levels and Types of requirements

Functional

Business
Level

BUSINESS REQUIREMENTS

WHY?

User
Level

USER REQUIRMENTS

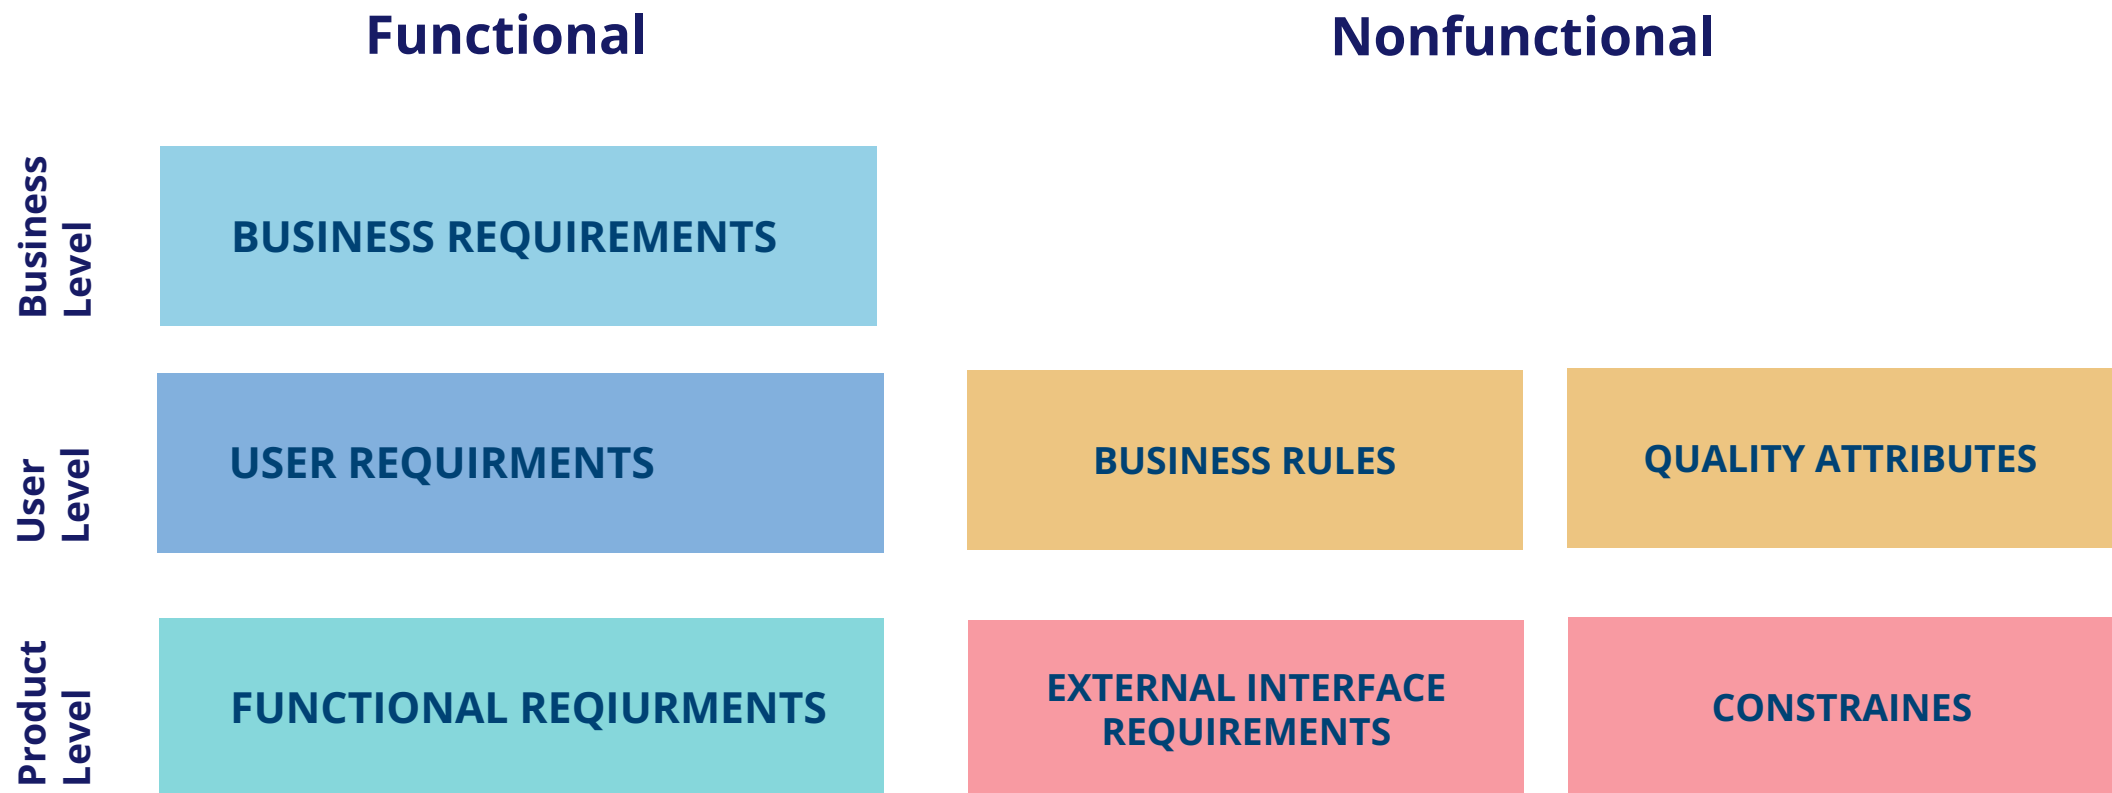

WHAT?

Product
Level

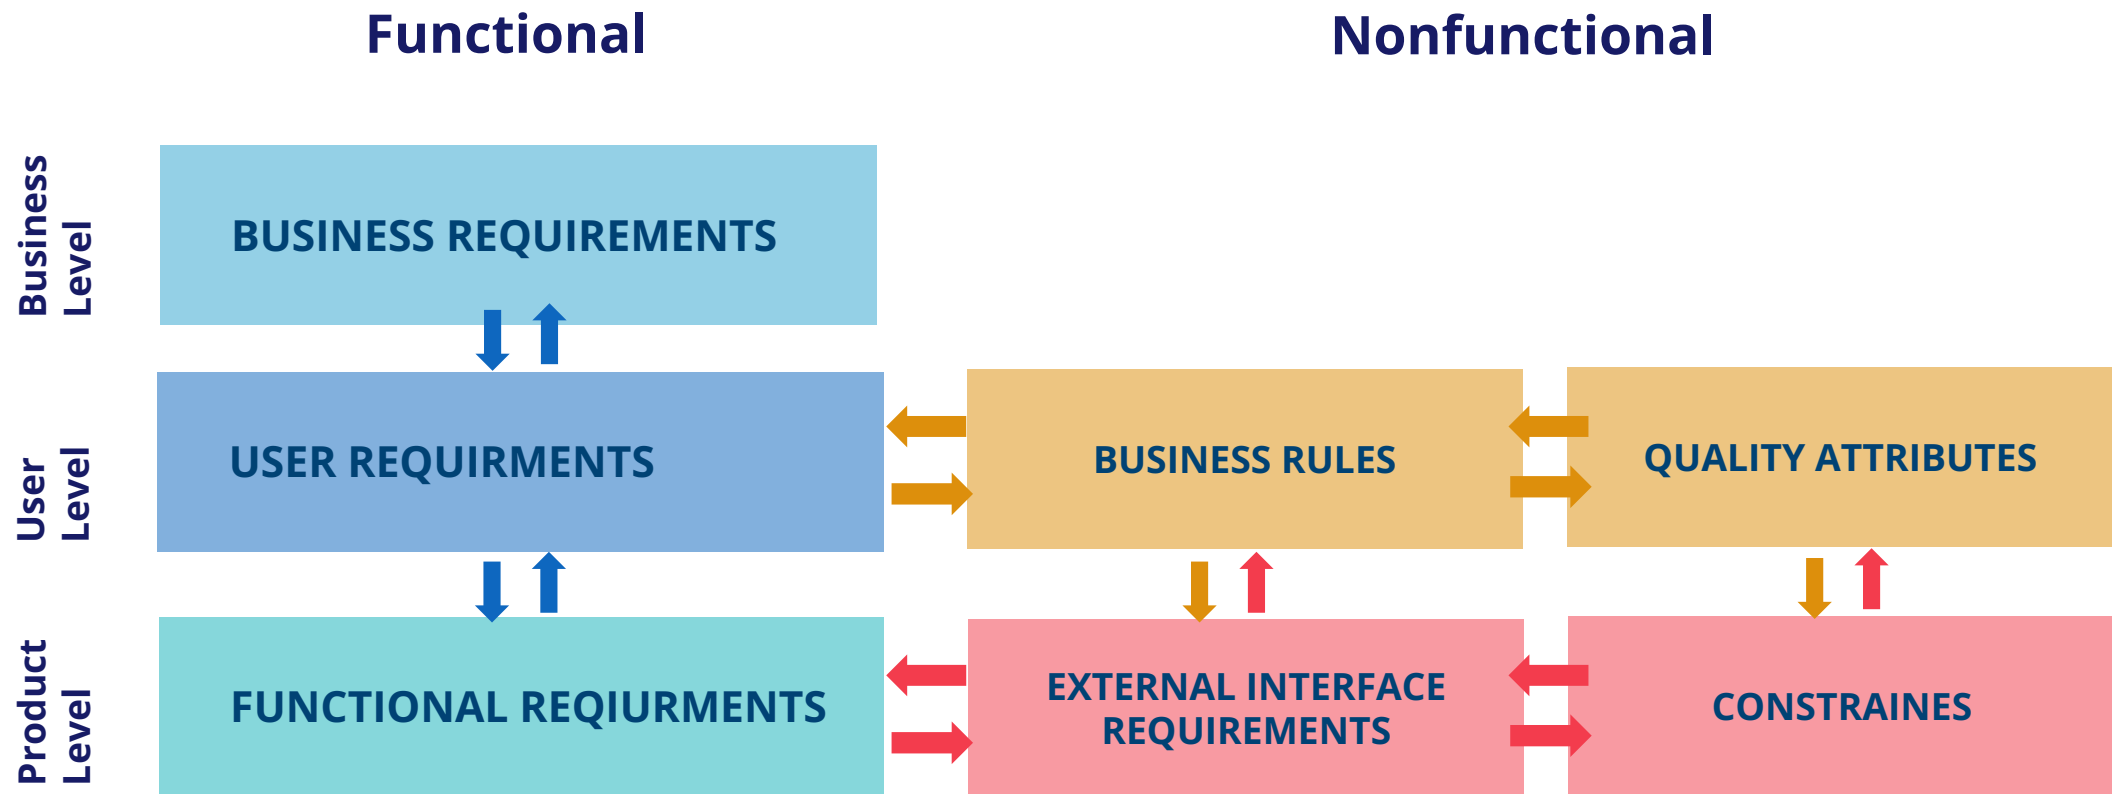

FUNCTIONAL REQUIRMENTS

WHAT?

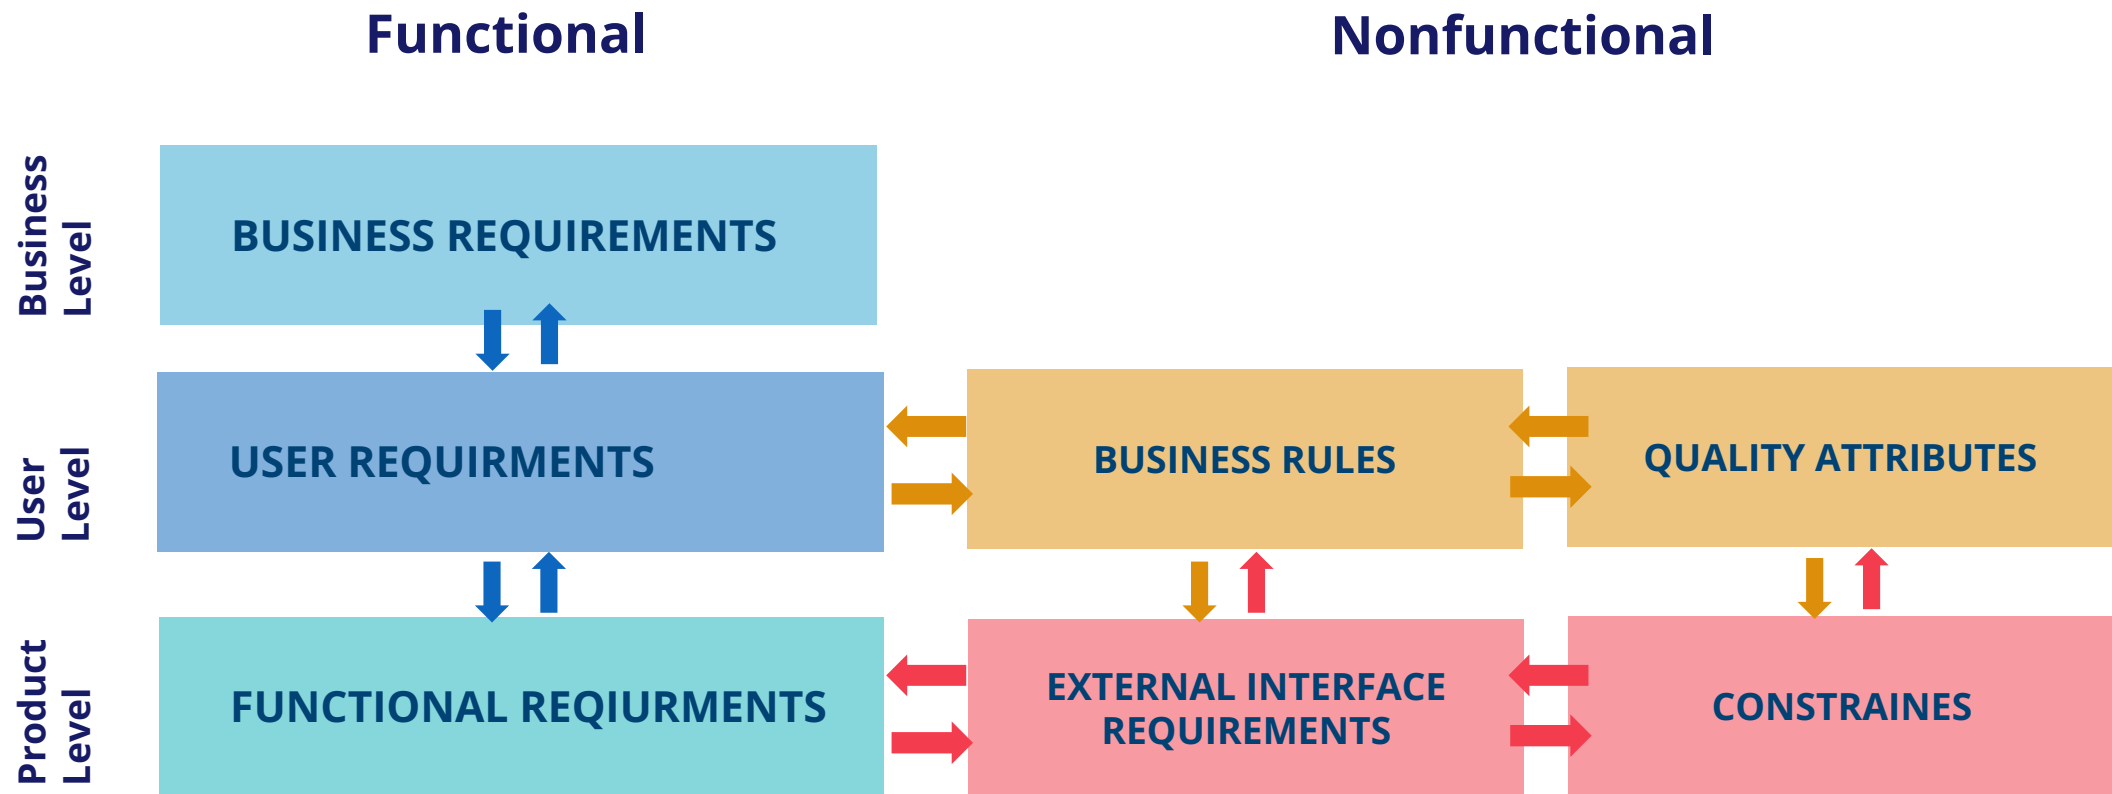

Levels and Types of requirements

Levels and Types of requirements

Levels and Types of requirements

Levels and Types of requirements

Business Level

"OMS application should reduce errors and increase efficiency by automating the process of creating, managing and delivering orders "

User Level

"Customer should be able to create a new order"

"Merchandiser should be able to check information about orders"

Product Level

"OMS application should have 'Ordering' tab for sorting, searching and filtering existing orders and for creating new orders.

Traceability between Requirements

Traceability

is a technique that provides a relationship between different levels of requirements in the system

Traceability between Requirements

Traceability plays several important roles:

- Verifying that an implementation fulfills all requirements.
- Verifying that the application does only what was requested.
- Impact analysis
- Helping with change management

Nonfunctional Requirements

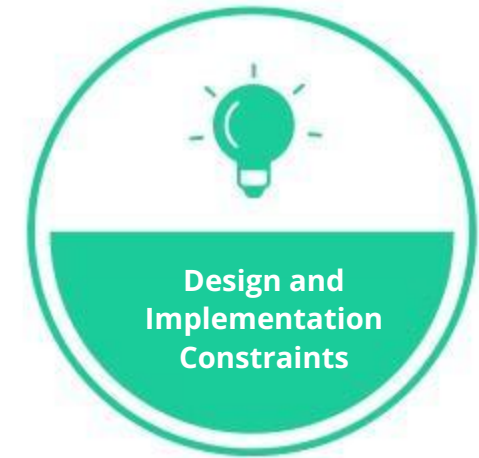

Corporate policies,
Government regulations,
Industry standards,
Computational algorithms

Usability, Portability,
Integrity, Efficiency,
Robustness

Description of all inputs
into and outputs from
the software

Specific technologies, tools,
programming languages,
which should be used in the
system implementation

Explicit and Implicit Requirements

Explicit

Clearly defined and documented

Implicit

Hidden or 'assumed' and not stated explicitly

Explicit and Implicit Requirements

- ✓ Password encryption
- ✓ Auto complete
- ✓ Short keys
- ✓ Default behavior of UI controls

Requirement Types. Example

	Req. ID	Requirements Description
Business Requirements	BR.01	Order Management System should be protected from unauthorized access.
User Requirements	UR.01	As User (any role) I want to Login so I can enter the System
Functional Requirements	FR.01	'Login' page should contain two fields 'User Name', and 'Password', checkbox 'Remember me' and two buttons – 'Login' and 'Reset'.
	FR.02	Registered Users shall be able to Login to System by providing Username & Password <input type="checkbox"/> Upon successful login to the system, Order Management System opens new window. The specialty is that different Roles see different tabs. <input type="checkbox"/> If the Credentials are not correct, then system notifies user about it and gives him another try
	FR.03	'Remember me' option on Login page saves last entered user name on current PC
Nonfunctional Requirements	NF.01	Performance: Upon providing correct credentials, User shall be redirected to the new window within 4 Seconds (max)
	NF.02	Platform Constraints: The Login Functionality shall behave same in different Platforms (Windows/Linux)
	NF.03	Portability: The System shall be portable enough for various devices such as: Laptop, Desktop, Mobile, Tablet

REQUIREMENT TYPES. EXAMPLE

	Req. ID	Requirements Description
Business Requirements	BR.01	Order Management System should be protected from unauthorized access.
User Requirements	UR.01	As User (any role) I want to Login so I can enter the System
Requirements	FR.01	'Login' page should contain two fields 'User Name', and 'Password', checkbox 'Remember me' and two buttons – 'Login' and 'Reset'.
	FR.02	Registered Users shall be able to Login to System by providing Username & Password <ul style="list-style-type: none"> □ Upon successful login to the system, Order Management System opens new window. The specialty is that different Roles see different tabs. □ If the Credentials are not correct, then system notifies user about it and gives him another try
	FR.03	'Remember me' option on Login page saves last entered user name on current PC
Requirements	NF.01	Performance: Upon providing correct credentials, User shall be redirected to the new window within 4 Seconds (max)
	NF.02	Platform Constraints: The Login Functionality shall behave same in different Platforms (Windows/Linux)
	NF.03	Portability: The System shall be portable enough for various devices such as: Laptop, Desktop, Mobile, Tablet

On the 'Login' page, pressing 'Enter' key should have the same effect as clicking on 'Login' button and pressing 'Esc' key as clicking 'Reset' button

Implicit Requirements

THANK YOU
