

Mobile Phone

- Hello

- They have long become an integral part of our life, and therefore it is difficult to imagine our life without them. Every year there are many new models of smartphones from different manufacturers. To attract the attention of consumers, companies must come up with new
- interesting features for their product.
- 17

- Now I will talk about the brightest plans and promises of the smartphone market.
- 5

- According to experts, in the coming years, smart smart phones with dual cameras, folding displays and fifth-generation cellular communication support will be available on the market.
- 14

- By "smart" biometrics, specialists understand the user's biometric identification system, which allows the owner to access the device and the applications installed on it.
- 11

- Another feature that is gaining popularity is the presence of two cameras in the smartphone, which provide higher quality photos. There are already a lot of such models on the market - these are Apple iPhone X, Samsung Galaxy S9 and Note 8, Xiaomi Note 5 and LG V30. Huawei went even further and in March 2018 introduced the first smartphone with a triple main camera - Huawei P20 Pro. Analysts believe that in the near future the range of such smartphones will continue to expand.
- 38

- The appearance of devices with folding displays is expected in 2019. According to rumors, the first such model will be the Samsung Galaxy smartphone family, and then the Motorola RAZR model. Also, the development of a smartphone with a flexible screen, the extension of which the user can get the display, like on a tablet, is also engaged in Huawei. ABI believes that by 2027 all leading brands of smartphones will add devices with folding or folding screens to their range. Deliveries of such devices by this time will exceed 248 million units.
- 40

- 5G will be another driver for the growth of the communicator market. In 2019, the first devices should appear with the support of an improved communication standard, and by 2025 most devices will be able to work on 5G networks. According to analysts, in 2027, manufacturers will release more than 1.4 billion 5G smartphones
