Introduction

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than our Moon. The planet's name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

Whoa!

This can be the part of the presentation where you can introduce yourself, write your email

The background is a light teal color with various geometric decorations. At the top, a thin black line with arrowheads at both ends spans the width. On the left, there are overlapping purple and blue diamonds. In the center, a white semi-circle is partially covered by a light blue circle containing a brown diamond. On the right, there is a complex pattern of overlapping brown diamonds and a white oval. Below the main title, there is a purple diamond and a white diamond. At the bottom, another thin black line with arrowheads at both ends spans the width.

01 The *patient*

Identifying *information*

Mars

Mars is a very cold place. It's full of iron oxide dust, which gives the planet its reddish cast

Jupiter

Jupiter is the biggest planet in the Solar System and the fourth-brightest object in the night sky

Venus

Venus has a beautiful name and is the second planet from the Sun. It's terribly hot

Patient *medical history*

Sarah Patterson

- Age: 50
- Gender: Female
- Allergies: None
- Location: Madrid, Spain

2010

Mercury

Mercury is the closest planet to the Sun

2017

Mars

Despite being red, Mars is actually a cold place

2020

Saturn

Saturn is a gas giant and has several rings

“This is a quote, words full of wisdom
that someone important said and that
can inspire anyone who reads them.”

—Someone *Famous*

Patient *examination*

Mercury

Mercury is the closest planet to the Sun

Mars

Despite being red, Mars is a very cold place

Venus

Venus is the second planet from the Sun

Jupiter

Jupiter is a gas giant and the biggest planet

Physical *examination*

Mercury

Mercury is the smallest planet of them all

Venus

Venus is the second planet from the Sun

Mars

Despite being red, Mars is actually a cold place

Discussion

“Neptune is the farthest planet from the Sun and the fourth-largest one in our Solar System!”

—Laura Bones

“Mercury is the closest planet to the Sun and also the smallest one in our Solar System”

—Monique Nelson

“Despite being red, Mars is a cold place. It’s full of iron oxide dust, which gives the planet its reddish cast”

—John James

Awesome *words*

Discussion *summary*

- Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than the Moon
 - The planet's name has nothing to do with the liquid metal, since Mercury was named after the Roman messenger god
 - Mercury's surface has a lot of craters, many of which were named after artists
-

worth a
thousand words

A picture always *reinforces the concept*

Images reveal large amounts of data, so remember: use an image instead of a long text. Your audience will appreciate it

Comparison

Area	Jupiter	Venus	Mars
Area 1	Mars is cold	Mars is made of basalt	Mars is a red planet
Area 2	Mercury is small	Earth has life	We all live on Earth
Area 3	Venus is hot	Jupiter is a gas giant	Venus is hot
Area 4	Saturn is a gas giant	Saturn has rings	Neptune's an ice giant

Diagnosis

Venus

Venus is the second planet from the Sun

Jupiter

Jupiter is the biggest planet of them all

Mercury

Mercury is the closest planet to the Sun

Saturn

Saturn is composed of hydrogen and helium

Mars

Mars is actually a very cold place

Neptune

Neptune is very far away from the Sun

Treatment

Venus

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than the Moon

Mercury

Venus has a beautiful name and is the second planet from the Sun. It's hotter than Mercury and its atmosphere is very poisonous

Patient *monitoring*

Conclusions

- Mercury is the closest planet to the Sun and the smallest one in the Solar System
- Mercury's name has nothing to do with the liquid metal, since Mercury was named after a Roman god.
- Venus has a beautiful name and is the second planet from the Sun. It's terribly hot, even hotter than Mercury, and its atmosphere is extremely poisonous.
- Earth is the third planet from the Sun and the only one that harbors life in the Solar System. This is where we all live
