

SCHOOL OF THE FUTURE

Борисов Никита 7

Г

I imagine the school of the future:

In my opinion approximately a 2030 school would look something like this (I hope that Russia will reach it in time)

You can about buses in 2030 will look like this

Possible students will ride these buses:

Perhaps in schools of the future in addition to the gym will be your stadium

THE GYM

SCHOOL STADIUM

School of the future

It would be great if you could wear whatever (within reason, of course) and have a locker for your stuff.

In some schools, can be a
dormitory for students.

Notebook in electronic form

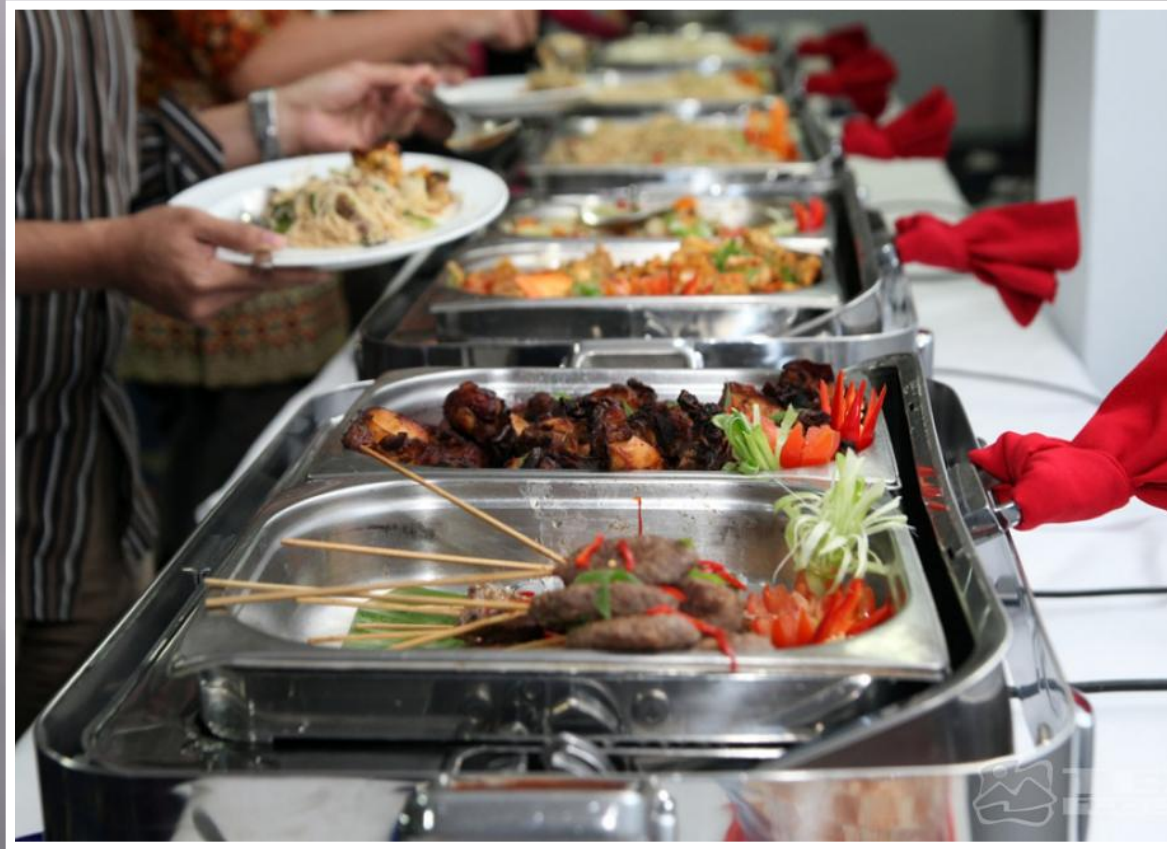

I'm sure in the future we will write not in notebooks, and tablets. There will be all subjects and all notebooks, we will no longer lie in wait for the problems with forgetting the notebooks, diaries, textbooks and pens. But the main problem in it besides "I forgot to charge" would be a bad sight. But in the future may be something that we will be able not to spoil the vision at all. It can also be a special application for smartphones, through which you can go not only with tablets in the app.

Maybe through the camera will transmit the hologram with which you can interact.

In school canteens will be a buffet with a large selection of dishes.

I very much hope that the school administration at least in the future will stop to save the students and will do normal repairs, give this soup instead of normal food and make classes as convenient as possible for students and teachers.
