THE VALUE OF LIFE

Международный конкурс эссе на английском языке

«Everyone is equal in the face of pandemic. Social Justice: Problems, Discussions, Solutions»

AUTHOR: Adelina Valiakhmetova

Scientific adviser: Natalya Vladimirovna Barboshina

Probably, there is not a single person in the world who would not believe that the years 2020-2021 are characterized by an extremely difficult situation everywhere, due to the spread of the new coronavirus infection Covid – 19 around the globe.

It is the health system that has undergone significant changes in connection with the pandemic, which is not at all surprising for us. The authorities, doctors, as well as the Ministry of Health had to urgently review the old rules for organizing the solution of any situations and include innovations in the methodology of their activities, which for years had not been subject to such extremely rapid amendments.

The epidemic has sharply raised the issue of inequality in the world and demonstrated how much an unfair, cruel social system has a huge impact on people's lives.

Everyone knows that rich people care more about their health, have access to better doctors and medicines, as a result of which their life expectancy is usually much longer than that of the poor.

Life = money ?

Social inequality has always been there, and it is necessary to strive to minimize such a division among people, as well as to provide everyone with proper medical services and the highest quality advanced technologies.

Thank you for your attention!
