# How we did the research

## How we chose the topic for research

- we were faced with a choice of what topic to study, and in the end everyone agreed that we should take the topic of earthquakes in Japan. Then we decided to divide this topic into 6 parts , and each of the students got 2 topics. We also formulated goals and tasks for the work. Aim to study the problem of natural disasters in japan . Natural disasters are fvequent in Japan thousands of people suttee from them . Lets explore the cause of the most tompon natural disasters and find out it they can he fredicted and picevented in advente .

## How I started working on the research

- I started working on tasks 3 and 4, I was thinking about how to design a study and which sites I should get information from , in the class we already came up with an introduction to our research. When the outline of my research was ready, I showed it to my teacher , who corrected the mistakes and pointed out the shortcomings in the work.

- in search of information on the project, I visited a large number of different sites , with the help of which I was able to correctly process the information and put it into research

- In this work, we learned a lot of new and interesting things , it was very interesting to find information for the research , it was a very cool experience for me , thank you very much for your attention

*The End*
