

Welcome To D-Link Router Customer Care Center

How to Reset a D-Link Router

An illustration showing a hand plugging a white power cord into a standard two-outlet wall socket. A magnifying glass with a gold frame is positioned over a blue D-Link router, which has a green power indicator light lit. The background is a light blue wall with a wooden floor at the bottom.

**Verify,
that your D-Link
router is currently
turned on and
plugged into a
power source.**

Locate the round “Reset” port on the back of your router.

D-Link Router Technical support Toll-Free Number- 1-888-738-4333

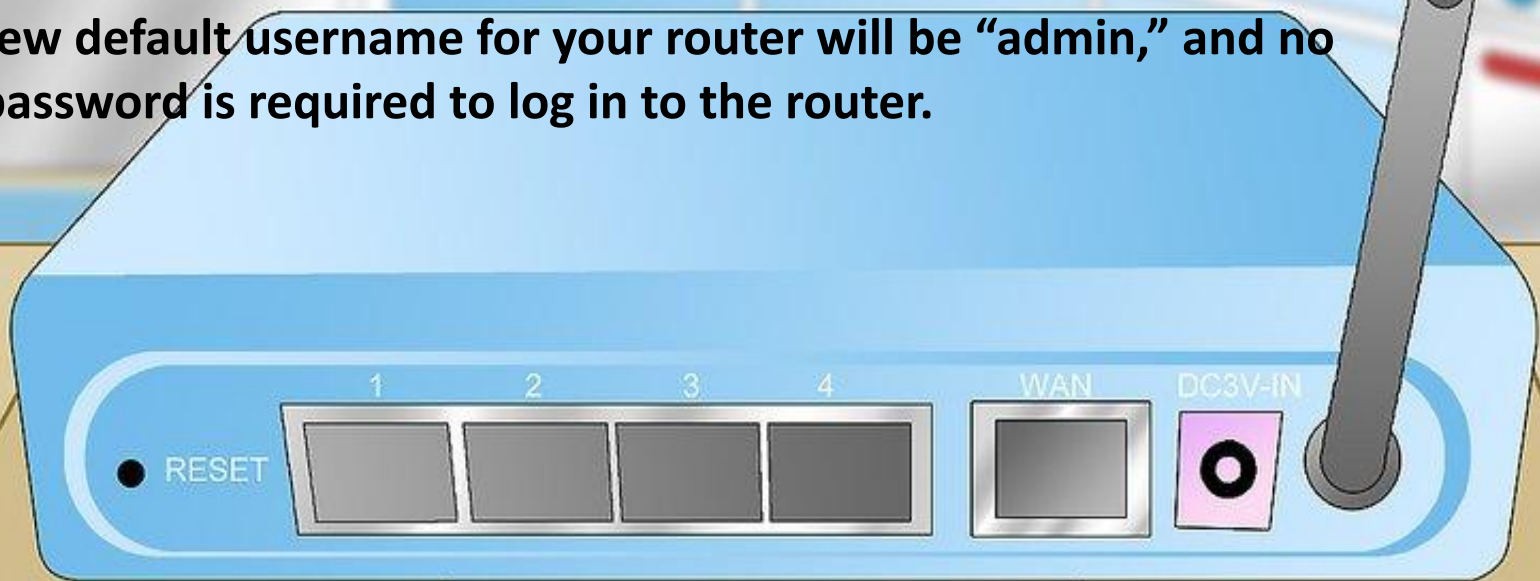

Use a straightened-out paper clip to press and hold the reset button for 10 seconds

**D-Link Router Technical support
Toll-Free Number- 1-888-738-4333**

Release the reset button after 10 seconds.

1. The router will restart and take about 15 seconds to completely reset.
2. Your router will be reset and restored to default factory settings when the “WLAN” light on the front of the router stops blinking.
3. The new default username for your router will be “admin,” and no default password is required to log in to the router.
