# ODI

Overbite

Depth

Indicator

# Overbite Depth Indicator with particular reference to open-bite

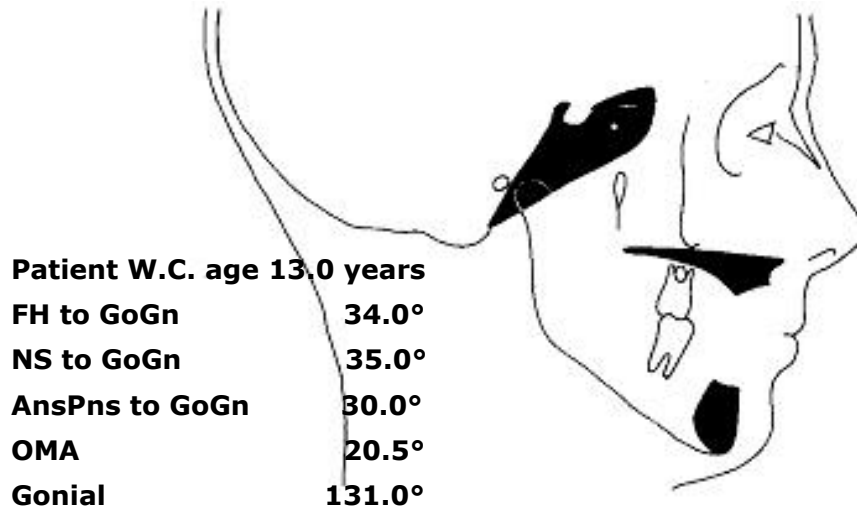

Young H. Kim

*Am. J. Orthod. 65:585-611, 1974*

# VERTICAL PROBLEM

- Gonial angle
- Mandibular plane angle  
(SN - MP, FMA)
- Occlusomandibular plane A.
- PFH / AFH
- Y- axis

# Which one is overbite or openbite?

A

B

C

D

# Normal occlusion sample

- **Group 1**

- **age range : 7-14 years**

- **Sample No. : 119 persons**

- Boys : 56**

- Girls : 63**

# Untreated malocclusion sample

**Age range : 7-16 years**

**Sample No. : 500 patients**

- **Group 2 (Deep – overbite group)**  
**4.5 – 11mm overbite range, 174 cases**
- **Group 3 (Normal – overbite group)**  
**0.5 – 4mm overbite range, 270 cases**
- **Group 4 (Open–bite group)**  
**0 - 11mm open-bite range, 56 cases**

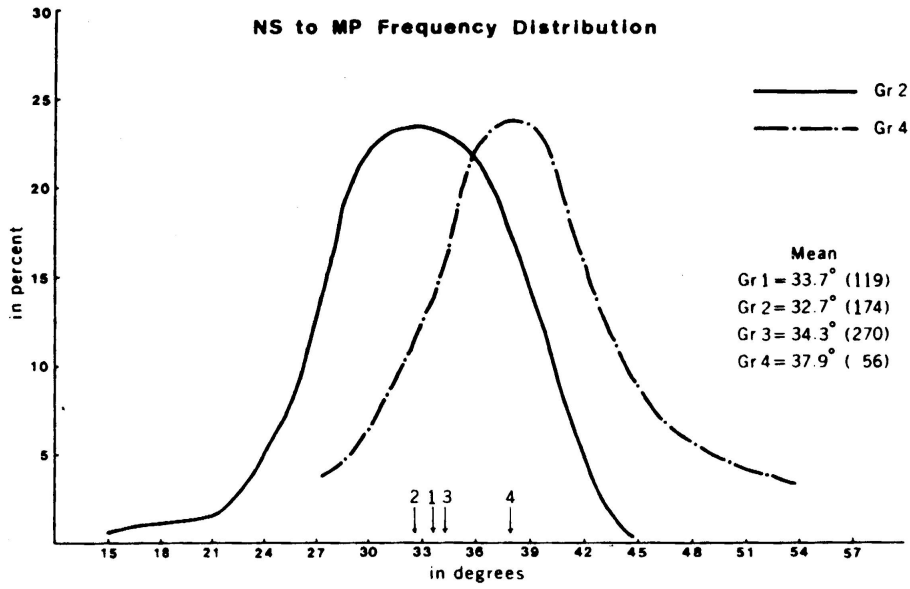

## Correlation coefficient between the incisal overbite depth and various measurements obtained from 119 normal persons

	<i>Maximum</i>	<i>Mean</i>	<i>Minimum</i>	<i>S.D.</i>	<i>C.C.</i>
<i>Comparative measurements of two base lines (FH and NS):</i>					
1 FH to facial plane	93.5	85.9	78.5	3.17	0.045
2 NS to facial plane	86.0	78.3	70.0	3.13	-0.025
3 FH to mandibular plane	38.0	26.0	14.0	4.91	-0.232
4 NS to mandibular plane	46.5	33.7	22.5	4.85	-0.195
5 FH to palatal plane	11.0	0.5	-6.5	3.16	0.109
6 NS to palatal plane	18.0	8.0	-1.0	3.45	0.150
<i>Measurements based on mandibular plane:</i>					
7 Palatomandibular plane	35.0	25.6	10.0	5.09	-0.291
8 Occlusomandibular plane	25.0	16.1	5.0	3.80	-0.126
9 Gonial angle	142.0	126.5	110.0	5.97	-0.239
10 Faciomandibular plane	79.0	68.0	59.5	3.71	-0.280
11 AB to mandibular plane	86.0	74.0	60.5	4.74	0.369
12 AB to MP plus FH to PP	91.0	74.5	59.5	6.07	0.394
<i>Incisal relationships:</i>					
13 Incisal angle	147.0	126.5	108.0	7.91	0.193
14 Incisal length from the upper lip (mm.)	8.5	3.9	0.0	1.38	0.187
15 Incisal overbite depth (mm.)	4.5	2.8	0.0	1.15	1.000

## Correlation coefficient between the incisal overbite depth and various measurements obtained from 500 persons with malocclusion

<i>Measurement</i>	<i>Maximum</i>	<i>Mean</i>	<i>Minimum</i>	<i>S.D.</i>	<i>C.C.</i>
1. FH to facial plane	95.0	85.9	77.0	3.12	-0.113
2. NS to facial plane	90.5	77.9	68.0	3.56	-0.088
3. FH to mandibular plane	46.0	26.5	9.0	5.76	-0.311
4. NS to mandibular plane	53.6	34.1	14.0	6.01	-0.281
5. Palatomandibular plane	45.0	27.8	14.0	5.65	-0.375
6. Occlusomandibular plane	29.0	18.3	6.5	4.10	-0.199
7. Gonial angle	150.0	125.9	105.0	6.29	-0.350
8. Faciomandibular plane	83.0	67.6	52.5	4.35	0.494
9. AB to mandibular plane	96.0	75.2	55.5	6.37	0.557
10. AB to MP plus FH to PP	98.5	74.0	53.7	7.31	0.588
11. Incisal angle	181.0	128.0	100.0	10.40	0.298
12. Incisal overbite depth (mm.)	11.0	3.5	-11.0	2.43	1.000

NS to MP Frequency Distribution

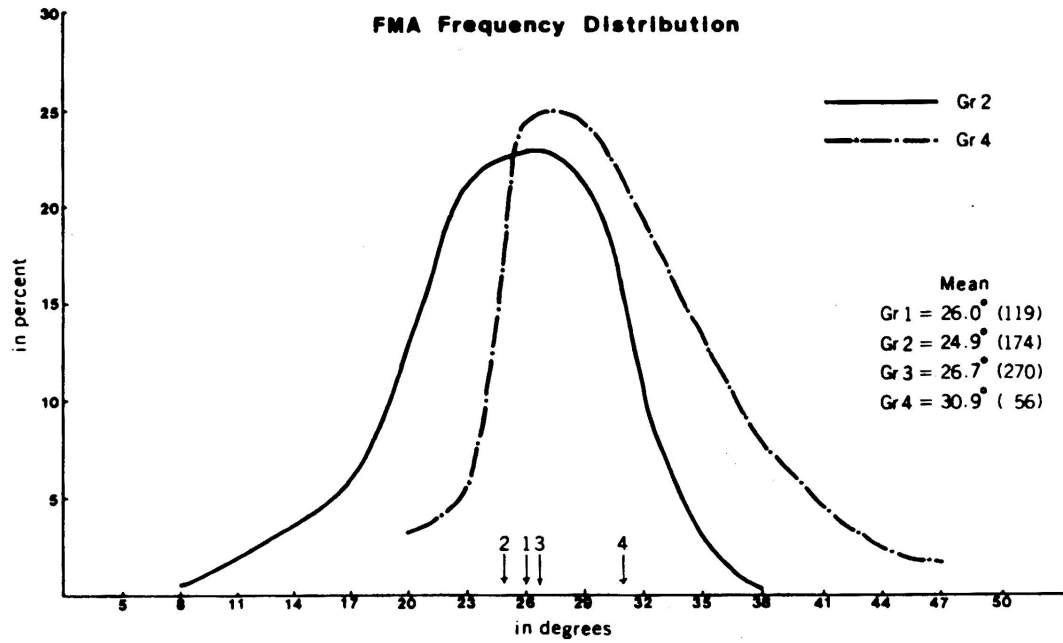

OMA Frequency Distribution

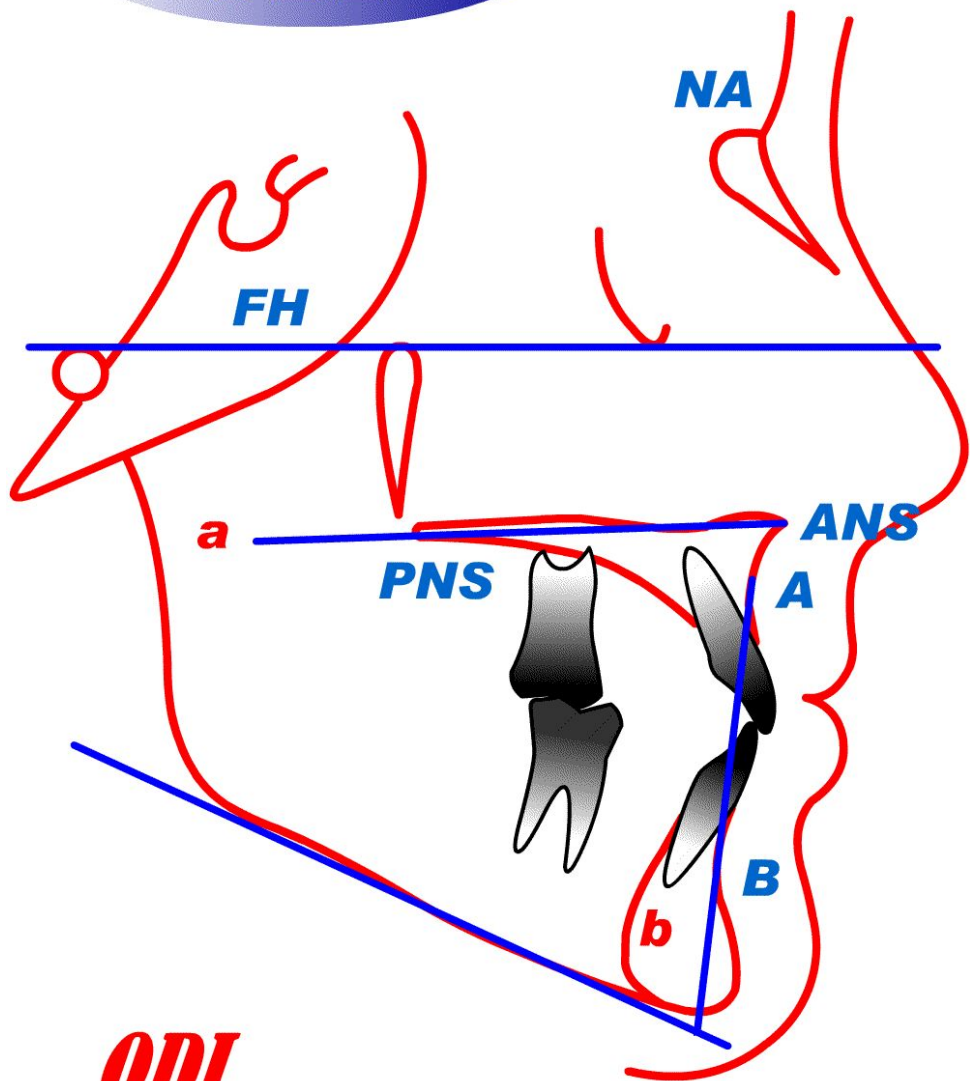

**FMA Frequency Distribution**

**ODI Frequency Distribution**

# ODI

## ODI

**= FH to Palatal plane A. (a)**  
**± A-B to Mandibular plane A. (b)**

- Mean ODI of normal sample  
:  $74.5 \pm 6.07^\circ$
- **Lower ODI value,**  
**greater tendency toward open-bite**
- **Higher ODI value,**  
**greater tendency toward deep overbite**
- **ODI is diagnostic indicator & provides  
information toward a differential diagnosis**

# Which one is overbite or openbite?

A

B

C

D

# ODI answer ...

Patient W.C. age 13.0 years

FH to GoGn	34.0°

<b>ODI</b>	<b>67.5°</b>

C

D

# Lower ODI value,

E.M. (F)

— 11.1 yrs  
- - - 13.2 yrs

# Higher ODI value, greater tendency toward deep overbite

— 11.8 yrs  
- - - 13.6 yrs

## Skeletal open-bite

- **result of unfavorable skeletal pattern**
- **aggravated by thumb-sucking or tongue thrusting habits**
- ODI : 60's or 50's

## Acquired open-bite

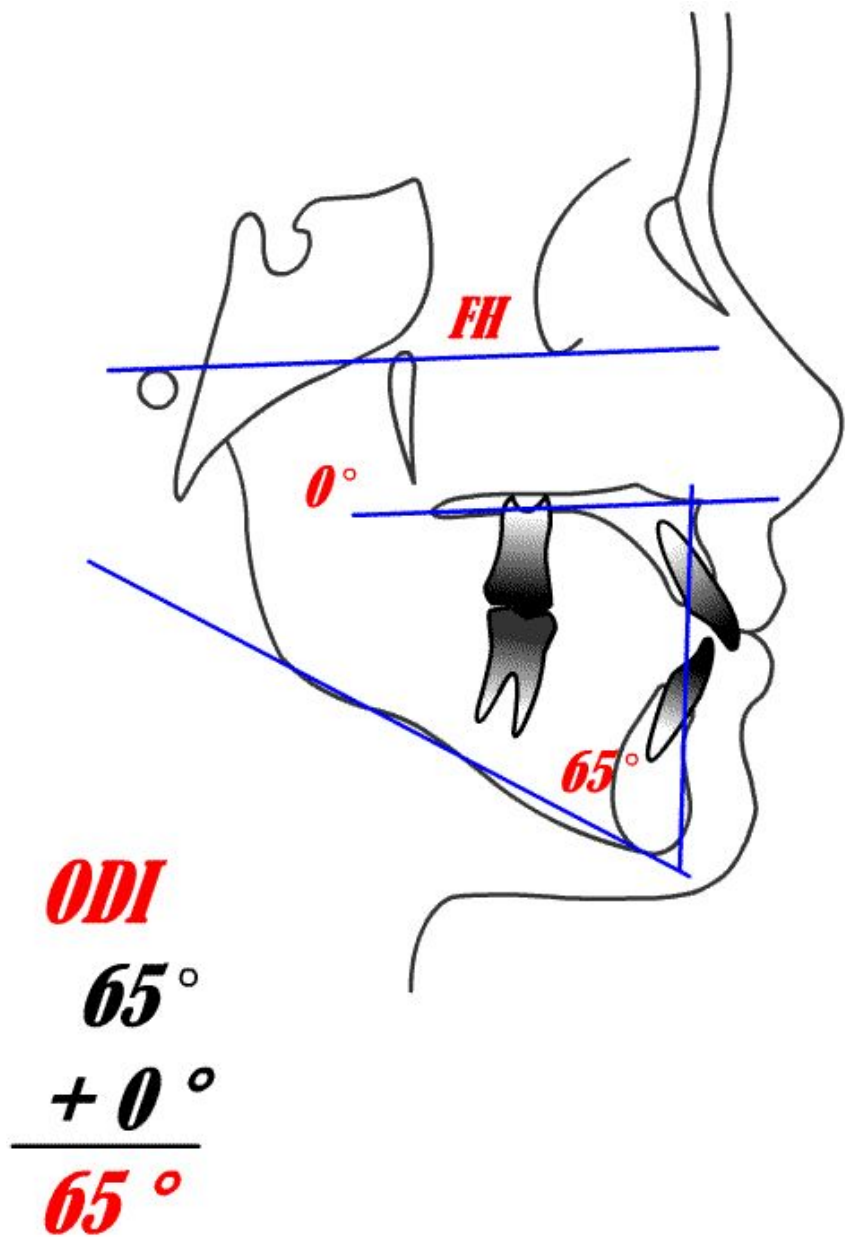

- **good facial pattern**
- **result of thumb-sucking or tongue thrusting habits**
- ODI : 70's or 80's

## skeletal deep-overbite

- **unfavorable facial pattern**
- **acute palatomandibular plane angle**
- **lack of vertical dimension**
- ODI : 80's or 90's

## Acquired deep-overbite

- **overeruption of anterior teeth and/or poor position of posterior teeth**
- ODI : 70's or 80's

- Mean ODI of normal sample  
:  $74.5 \pm 6.07^\circ$
- **lower ODI value,**  
**greater tendency toward open-bite**
- **higher ODI value,**  
**greater tendency toward deep overbite**
- **ODI is diagnostic indicator & provides  
information toward a differential diagnosis**

# APDI

Antero -

Posterior

Dysplasia

Indicator

Anteroposterior Dysplasia Indicator  
: An adjunct Cephalometric differential  
diagnosis

Young H. Kim,  
*Am. J. Orthod. 73:619-633, 1978*

# **Cephalometric analysis of A-P dysplasia**

**Steiner(1953) : ANB angle**

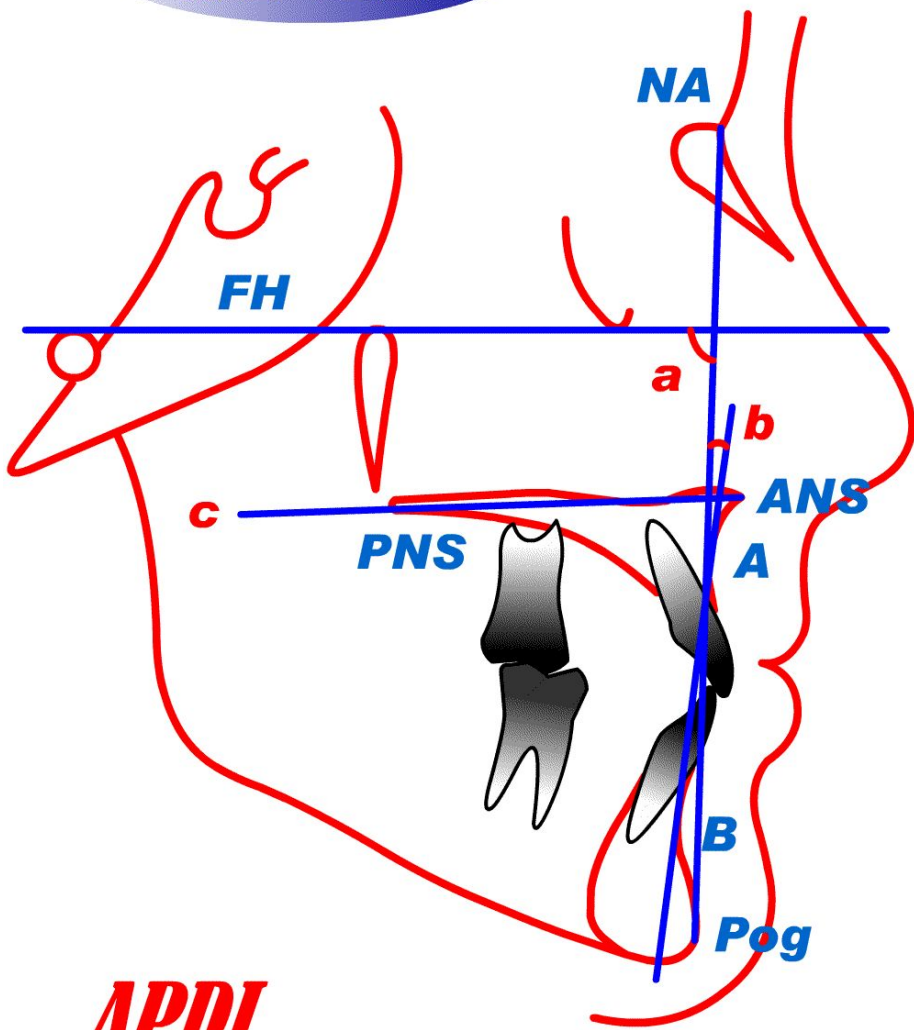

**Downs(1948) : A-B plane angle**

**Hitchcoch(1973) : A-B plane to occlusal  
plane**

**Jacobson(1975) : Wits appraisal**

**Ferrazzini(1976) : perpendicular line  
from point A and Mx. plane  
(ANS-PNS)**

# APDI

- APDI**
- = Facial A. (a)**
- ± A-B plane A. (b)**
- ± Palatal plane A. (c)**

# Sample No.

- Group 1 : normal occlusion sample (102)
- Group 2 : Class I malocclusion (214)
- Group 3 : Class II malocclusion (624)
- Group 4 : Class III malocclusion (36)

# MEASUREMENTS

1. Molar displacement	1.000
2. Facial angle (Downs')	0.184
3. Convexity (Downs')	0.434
4. A-B plane(Downs') angle	0.566
5. SNA	0.116
6. SNB	0.321
7. ANB	0.495
8. Palatal plane to FH plane angle	0.159
9. Mandibular plane to FH plane angle	0.168
10. Palatomandibular plane angle	0.069
11. Gonial angle	0.155
12. Y-axis angle	0.009
13. "Wits appraisal"	0.639
14. anteroposterior dysplasia indicator	0.643

Correlation coefficient value : Displacement of  
molar relationship versus various cephalometric  
measurements  
(N = 874)

High C.C :

Wits appraisal (0.639)

APDI (0.643)

# SNA,SNB,A-B plane angle ; same APDI ; different

**A**

**B**

# SNA,SNB ; same

## APDI ; different

- APDI : facial angle  $\pm$  A-B plane angle  $\pm$  palatal plane angle
- Mean value of APDI =  $81.4 \pm 3.79^\circ$ 
  - Smaller APDI value : distoclusion
  - Larger APDI value : mesioclusion
- APDI reading provides information needed for a differential diagnosis and for planing an appropriate treatment
