# AI University: Reasons

Today's IT development more and more requires usage of AI methods for automation of processes and increasing level of automation.

**AI is not a whim, AI is a demand!**

Our mission – give best IT specialist a good base for working with AI modules on their projects.

# AI University: Course entrance criteria and process

Have at least 3 hours a week for completing home tasks

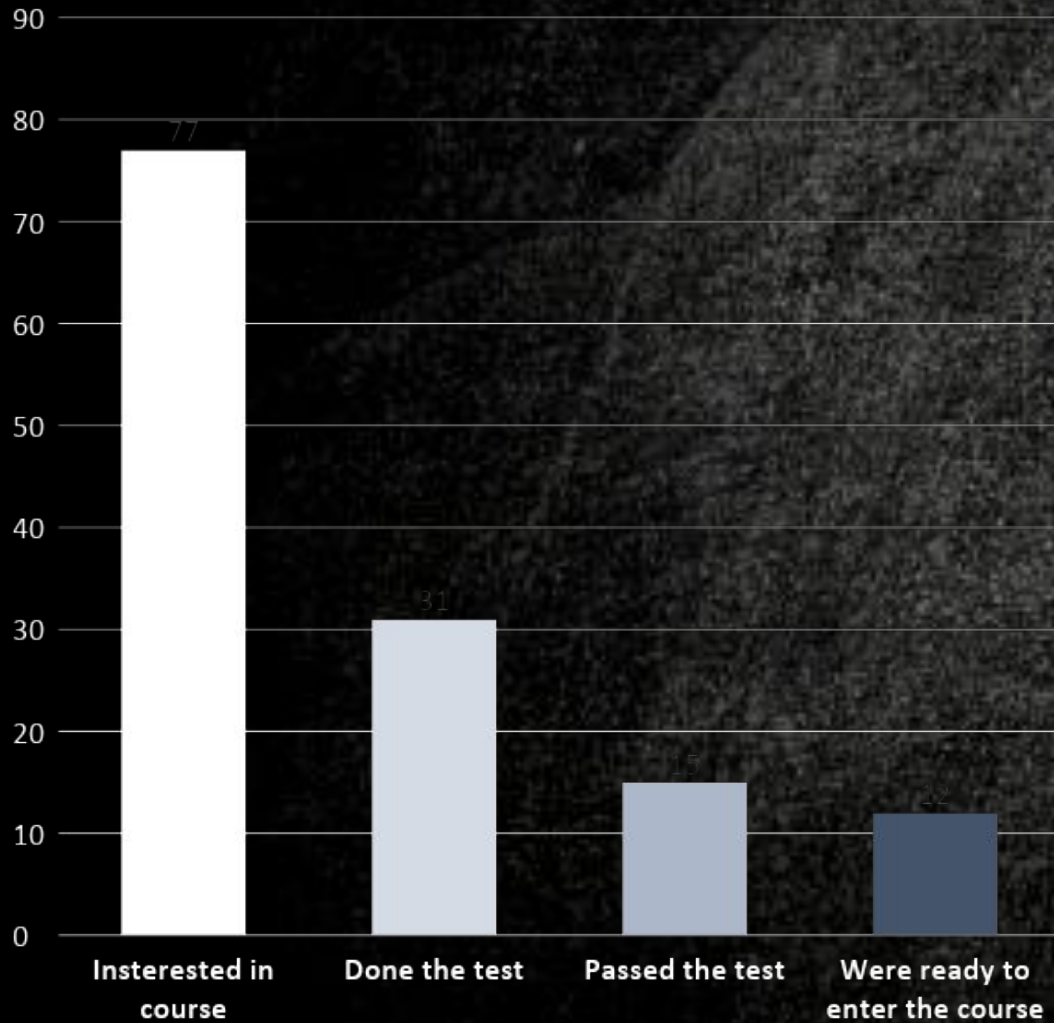

Have basics in math statistics, programming and probability theory

Successfully complete tasks of the entry test

# AI University: Course entrance results

## Number of people on each step

## Results of people who done the test

# AI University: Course components

## Python

Retreshing the knowledge in python and training skills of creating environments and using AI libraries.

Learning to process data sets

## Machine Learning

classes of ML tasks and main algorithms.

Understanding how to choose metrics and how to train models.

Machine Learning

## Neural

## Networks

Neural Networks architectures and train tuning process.

How to choose metrics, optimizer, loss function.

## Deployment

Learning to deploy build solutions to production

# AI University: TimeTable

No	Lecture theme	Main lecturer	Place of lecture	Date of lecture
<b>Python section</b>				
1	Jupyter Notebook . Anaconda and environment set up. GPU usage for AI.	Kirill Bushuev	3.3.3R – ERFURT	July 4 16:00
2	AI libraries. Part 1: pandas, numpy, scikit-learn,	Artem Odintsov	3.3.3R – ERFURT	July 9 16:00
3	AI libraries. Part 2: tensorflow, keras, pytorch, opencv	Artem Odintsov	3.3.3R – ERFURT	July 11 16:00
<b>Machine Learning section</b>				
4	Logical and metrical methods of classification	Anton Zubarev	3.3.3R – ERFURT	July 16 16:00
5	Linear methods of classification and quality metrics.	Vasily Boychuk	3.3.3R – ERFURT	July 18 16:00
6	Linear regression Support Vector Machine	Vasily Boychuk Kirill Bushuev	3.3.3R – ERFURT	July 23 16:00
7	Dimension decrement, PCA, composition of algorithms	Anton Zubarev	3.3.3R – ERFURT	July 25 16:00
8	Clustering. (Learning without teacher )	Kirill Bushuev	4.1.1 – CLASSROOM	July 30 16:00
<b>Neural Networks section</b>				
9	Introduction of Neural Networks	Anton Zubarev	4.1.1 – CLASSROOM	August 1 16:00
10	FFNN. Metrics and evaluations of NN learning	Kirill Bushuev	4.1.1 – CLASSROOM	August 6 16:00

# AI University: Tasks for students

## ML task (Pulsar search)

contain simple stars and pulsars. We need to train classifier for extracting correctly pulsars from whole amount of data

## NN task (Pneumonia)

We have an amount of x-ray photos of human chest. We need to understand if a person has a pneumonia or not

## Final Exam

P

Student need to prepare their results in a form of a presentation and try to make us «trust» and «buy» their solution

# AI University: Tasks for students

## Classification of stars: Task structure

**Goal: classify star as a pulsar or a regular star**

**Data set:**

- Number of stars: 17 898
- Number of features: 8 features and class of star
- 1 639 pulsars
- 16 259 usual stars

**Challenges for students:**

- Define important features and understand the meaning of each of them
- Find way to use all given data in learning process
- Choose the best model for the classification

# AI University: Tasks for students

## Classification of Pneumonia: Task Structure

**Goal:** classify x-ray of the lungs and say person is healthy or has pneumonia

### Data set:

Number of x-rays: 5 863

1 583 healthy lungs

1 493 lungs with virus pneumonia

2 780 lungs with bacteria pneumonia

### Challenges for students:

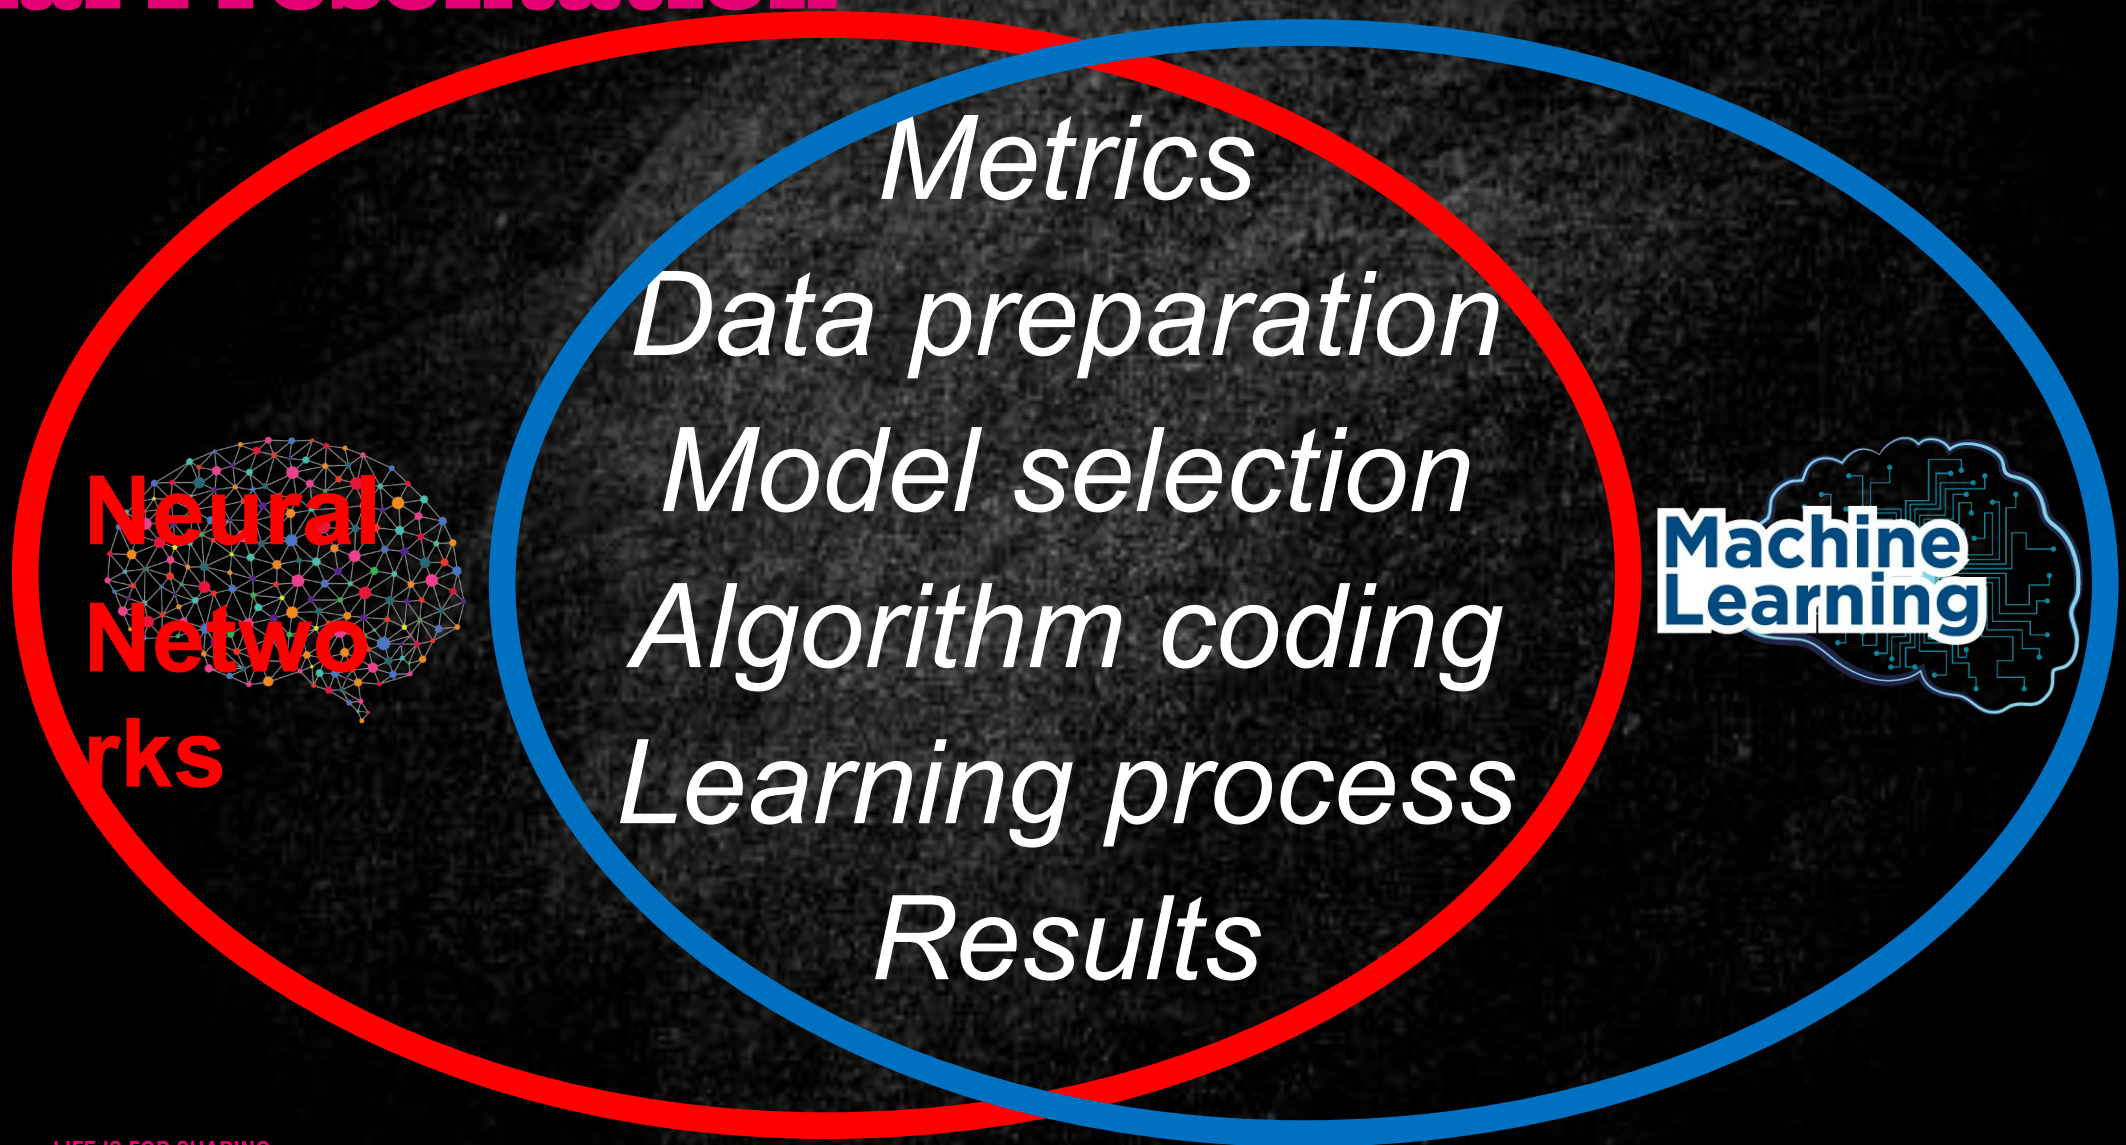

Clean images from noise

Find way to use all given data in learning process

Choose the best model for the classification

# AI University: Tasks for students Final Presentation

# AI University: Results Evaluation Criteria

Revision of code committed by students to Git repository

## Exam passing (presentation and questions)

Student	Classification of breast cancer (ML)			Classification of pneumonia (Neural Networks)			Final score
	Task	Presentation	Theme understanding	Task	Presentation	Theme understanding	
Student name							

# AI University: Student Results

## Classification of stars

Score type	Task	(ML) Presentation	Theme understanding	Total score
Best	5	5	4,25	14,25
Average	3.8	3,7	3,5	11
Worst	2,5	2	2	6,5

## Classification of pneumonia(Neural

	Task	Networks) Presentation	Theme understanding	Total score
Best	5	5	4,25	14,25
Average	3,5	3,6	3,2	10,5
Worst	2,5	2	2	6,5

Was the course?

Desired  
length  
of the  
course

3  
months

В целом, курс мне понравился, остались хорошие впечатления и какие-то знания :)  
Вот тема с анлоком нейронки и деплоем мне очень интересна, но не раскрылась для меня. А так, я очень доволен, как слон. Теперь пожиная плоды, стебают вот, что это тупо все if под капотом, но это не совсем так)

СПАСИБО!!!  
Спасибо за курс, хотелось бы больше практики и упорядоченности в лекциях и материалах.  
Спасибо за курс! Это было очень полезно!

# AI University: Plans for Improvement IN FLOW 2

Increase quality of material and adopt it for better understanding

Prepare data sets that would be closer to company industry

Pay more attention to preprocessing of data sets

Pay more attention to Pipeline of work with AI

Split graduation exam in two parts after each module

Increase mentoring activities

# Statistics & budgeting

# AI University: Time load for the team

Activity	Flow 1(h)	Flow 2(h)
<b>Lectures</b>		
<b>Preparation</b>	12	8
<b>Reading</b>	3	3
<b>Task</b>		
<b>Introductory task check</b>	0.5	0.5
<b>Review of exam task</b>	5	5
<b>Mentoring</b>	6	8

**Thanks For Your  
Attention!**

**Any questions?**
