

DIGITAL LIFE

& TECHNOLOGICAL PROGRESS

COMPUTER

The background image shows a museum exhibit of the ENIAC computer. The room has a black and white checkered floor. The walls are covered with dark panels, some of which have various components and cables attached. A monitor on the right side of the image displays a historical photograph of a person. The overall atmosphere is that of a historical scientific or technological museum.

- We can't imagine our live without computers. But first computer was different from the modern one. It was a very big calculation system and called ENIAC that was invented in 1946. It occupied about 1,800 square feet and used about 18,000 vacuum tubes, weighing almost 50 tons.
- Nowadays we have very smart computers from common that we use everyday to quantum-based machines.

TELEVISION

- First mechanic television was invented about 1930s. It's based upon mechanical scanning device, such as a rotating disk with holes in it or rotating. It scans the scene and generates video signal.
- Today we have a wide variety of television screens. Previously, TVs took up a lot of space, but now they can easily fit on our walls.

MOBILE PHONE

- The history of phone was started a long time ago but first mobile phone example was invented in the middle of the 20th century in the USSR.
- The most of us now have pocket smartphones and tablets which we are using for chatting friends, listening to music, reading news, playing games, watching videos, reading e-books and so on.

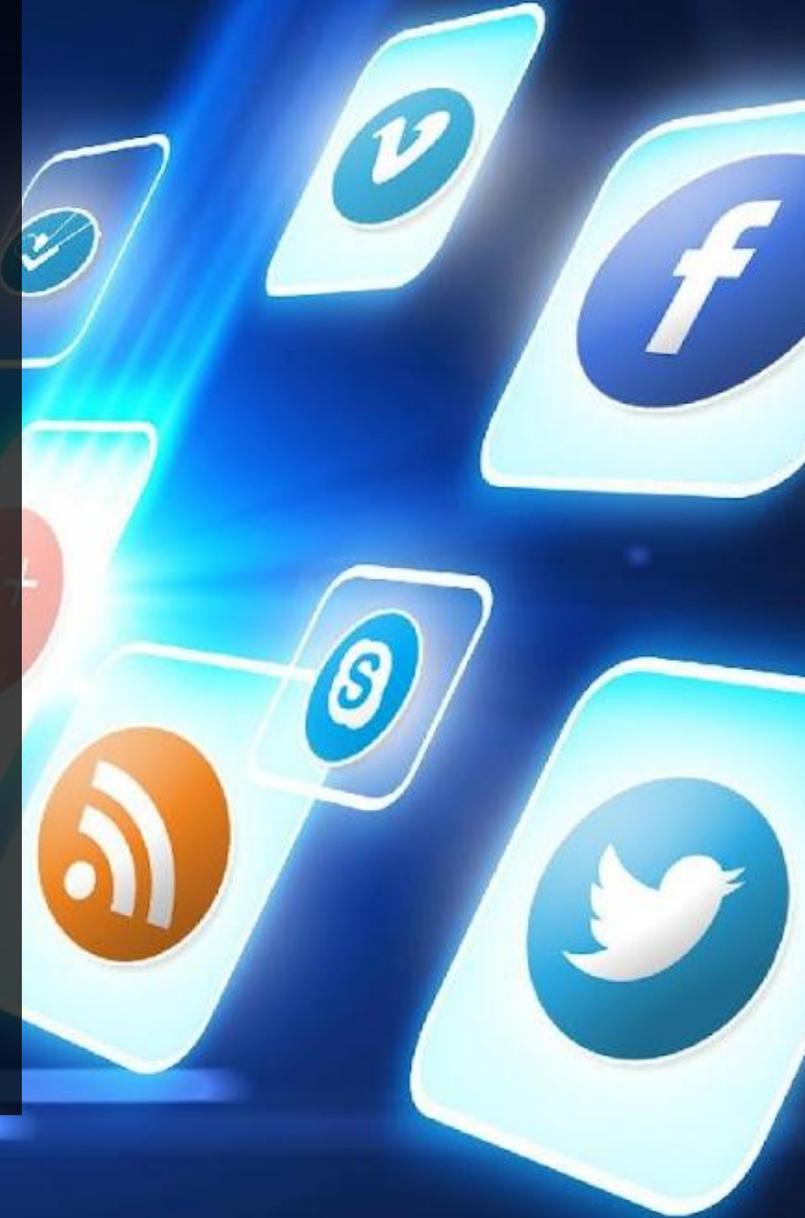

CARS WITH AUTOPILOT FEATURES

- One of the main recent inventions was cars with autopilot. It's a very useful for us because it reduce the level of accidents on the road and you will no longer need to control your vehicle.
- At this moment the most popular brand of this kind of cars is Tesla which produces and delivers them all over the world. As stated by the Tesla it will be the future of driving.

SOCIAL MEDIA DEVELOPMENT

- Today we shouldn't send the message to another city or maybe country and wait answer for a very long time like it was at 100 years ago.
- You can send to your friend photo, audio, video and text content for seconds for free using Facebook. Or you can watch video and maybe create your own and publish it on YouTube video hosting. And if you want you can try Instagram for upload your photos on your profile or see another pages. It's all a social media.

VIRTUAL REALITY

- 30 years ago, people could not imagine something like virtual reality, but with the evolution of technology, the world has seen inventions related to this sphere.
- It's an unbelievable invention that can change our life in the near future. Actually even now we can try it newest technology, but at the first time it will be too expensive device. Most likely VR will be used in our homes, for example for help us in cooking by display us the recipe or for control domestic appliances directly.
