Appearance of a profession

- The profession of a builder was born in ancient times, at the time when there was a need for shelter from the elements and overnight stay.

Builders are conventionally divided into two large groups: managers or engineers and executors.

1

Builders-managers. This group includes specialists with higher engineering education. They are engaged in the design of general and narrowly focused systems.

2

Builders-executors. This segment includes most construction specialties: mason, roofer, clerk, finisher, etc.

On what specialties to study

In order to work as a builder, you should choose one of the following specialties:

Architecture.

Building.

Reconstruction and restoration of architectural heritage.

Construction of unique buildings and structures

Engineer.

What do you have to do at work and specialization?

Managerial specialties.

- Search for customers.
- Design of buildings and structures with the development of a presentation for the client.
- Search builders-performers.
- Control of all processes in order to prevent negligence and errors.
- Financial component ,etc.

Executive specialties.

- Physical work.
- Brainwork.
- Selection of building materials,etc.

- The profession of a builder is considered quite high demand. The need for more comfortable housing is constantly increasing. Demand causes the need for new buildings and the opening of additional construction vacancies.
