

STOCK MARKET AND TRADING

WHAT IS A STOCK MARKET?

- A stock market or equity market is a public entity for the trading of company stock (shares) and derivatives at an agreed price.
- These are securities listed on a stock exchanges as well as those only traded privately.
- The stocks are listed and traded on stock exchanges which are entities of a corporation or mutual organization. The largest stock market in the USA, by market capitalization, is the NYSE.

WHAT ARE STOCKS?

- ⦿ At some point, just about every company needs to raise money
- ⦿ In each case, they have two choices:
- ⦿ Borrow the money, or
- ⦿ Raise it from investors by selling them a stake (issuing shares of stock) in the company

- 
- ◎ When you own a share of stock, you are a part owner in the company with a claim (however small it may be) on every asset and every penny in earnings.
 - ◎ Individual stock buyers rarely think like owners, and it's not as if they actually have a say in how things are done. Nevertheless, it's that ownership structure that gives a stock its value

WHAT IS A STOCK EXCHANGE ?

- A market in which securities are bought and sold: "the company was floated on the Stock Exchange".
- The initial offering of stocks and bonds to investors is by definition done in the primary market and subsequent trading is done in the secondary market.
- A stock exchange is often the most important component of a stock market.
- Supply and demand in stock markets are driven by various factors that, as in all free markets, affect the price of stocks.

ROLE OF STOCK EXCHANGE

- Raising capital for business:- common forms of raising capital-

- Mobilizing savings for investments.
- Creating investment opportunities for small companies.
- Government capital rising for development projects.
- Facilitates company growth.
