Introduction

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than our Moon. The planet's name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

"This is a quote. Words full of wisdom that someone important said and can make the reader get inspired."

—Someone famous

Mercury

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than our Moon

Venus

Venus has a beautiful name and is the second planet from the Sun. Its atmosphere is extremely poisonous

Jupiter

Despite being red, Mars is a cold place, not hot. The planet is full of iron oxide dust, which gives the planet its reddish cast

Theory 1

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than our Moon. The planet's name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

Venus has a beautiful name and is the second planet from the Sun. It's terribly hot—even hotter than Mercury—and its atmosphere is extremely poisonous. It's the second-brightest natural object in the night sky after the Moon

Theory 2

Analysis
Jupiter is a gas giant and the biggest planet
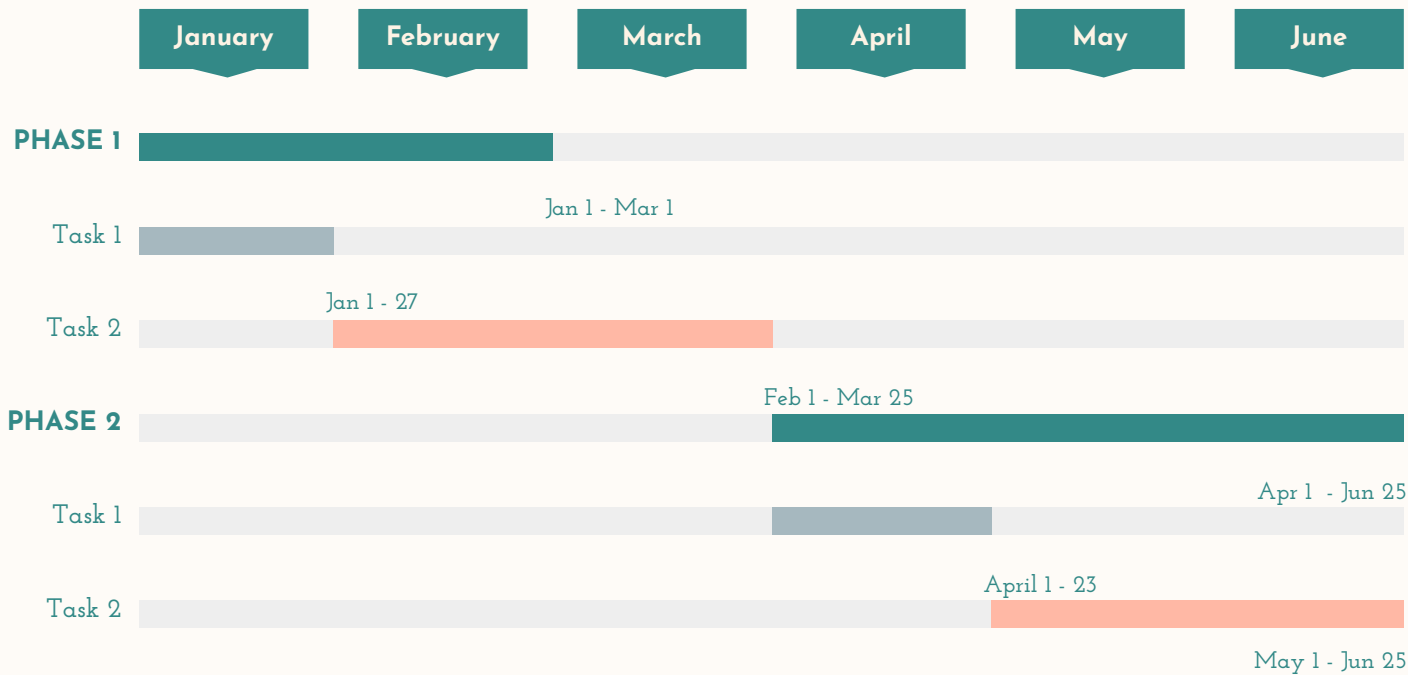

Research
Venus has a beautiful name, but it's terribly hot

Data Study
Despite being red, Mars is a cold place

Comparison
Saturn is the ringed one and a gas giant
