

**I THINK ONE OF THE BEST
INVENTIONS OF THE
GASOLINE INTERNAL
COMBUSTION ENGINE.**

Jean Joseph Etienne Lenoir

- In 1860 he constructed the first practical suitability of a gas internal combustion engine. Engine power was 8.8 kW (12 hp..).
- Lenoir engine was designed in France.

Lenoir engine

Currently, the internal combustion engine is the main type of automobile engine.

The invention of the internal combustion engine has opened up new possibilities for the development of social production capacity and led to a global change in the socio-economic relations prevailing in society.

Internal combustion engine. Modern society can not exist without the normal construction machinery, machine tools and machines, cars and airplanes, ships and diesel generators.

Internal combustion engine. This is the basis of our home. This heat in our home and comfort. This is the bread and other products on our table every day.

I believe that the internal combustion engine should be included in the film, because there is no movement of vehicles without it.
