# Independent work Pneumonia.

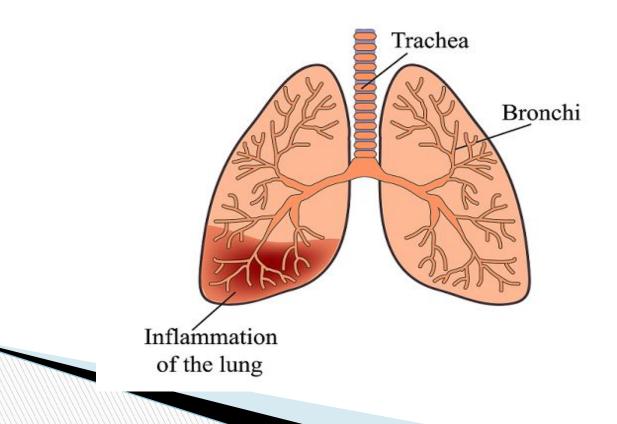

Performed by Ospanova G.A Group: 066- 1

## Plan

- Definition
- Classification
- Etiology
- Pathogenesis
- Clinic
- Diagnostics
- Treatment
- Literature

## **Definition**

Pneumonia is an inflammatory process of the lung parenchyma that is commonly caused by infectious agents.

## Classification

According to causes

- Bacterial (the most common cause of pneumonia)
- Viral pneumonia
- Fungal pneumonia
- Chemical pneumonia
- Aspiration pneumonia

## According to areas involved

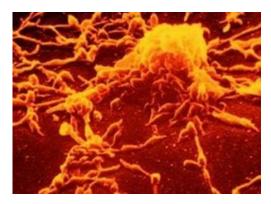

- Lobar pneumonia; if one or more lobe is involved
- Broncho-pneumonia; the pneumonic process has originated in one or more bronchi and extends to the surrounding lung tissue.

## ETIOLOGY

## Community-acquired pneumonia

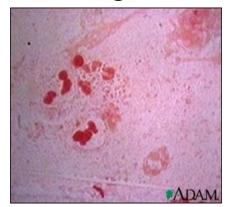

Streptococcus pneumoniae- 30-95%

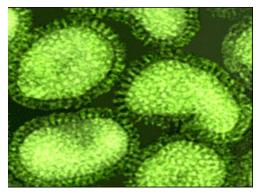

Mycoplasma pneumoniae

#### Pathogens:

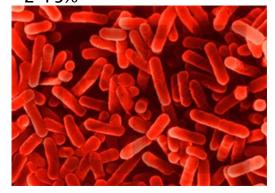

Haemophilus influenza- 5-18%

Chlamydia pneumoniae-2-8%

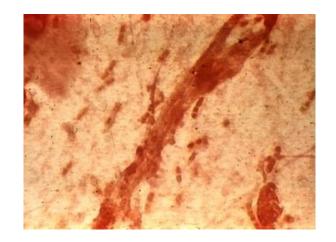

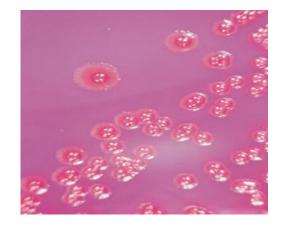

gripp virus - 2-15%

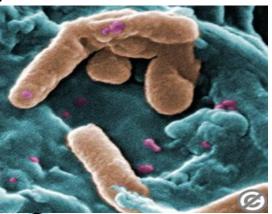

Legionella pneumoniae- 2-10 %

## Nosocomial pneumonia

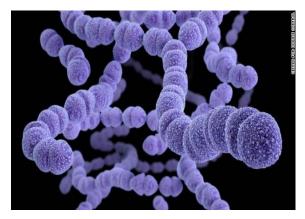

Klebsiella pneumoniae

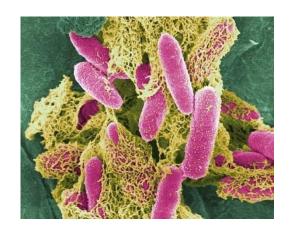

Staphilococcus aureus

Streptococcus pneumoniae

Enterobacter spp.

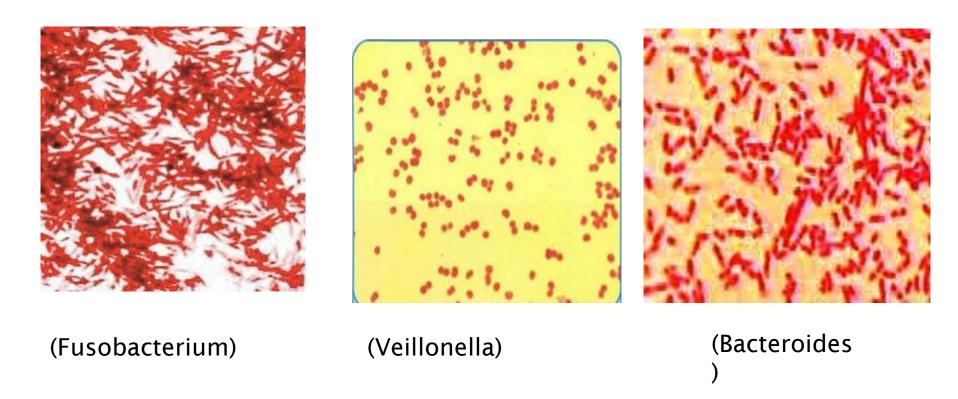

Coli

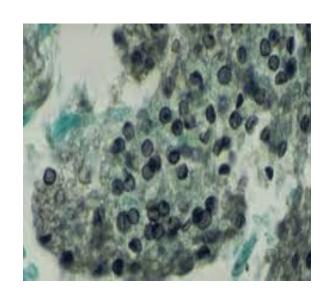

E.

Pseudomon aeruginosa

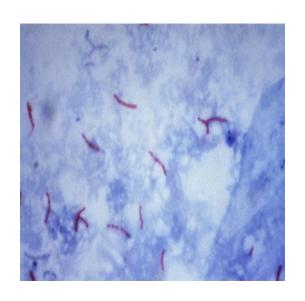

## Aspiration pneumonia

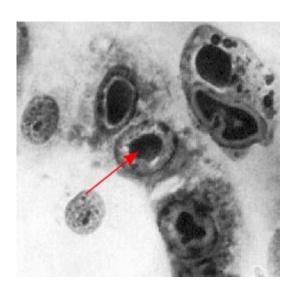

## Pneumonia in immunosuppressed persons

Pneumocystis carinii

Mycobacterium tuberculosis

Цитомегаловирус

## **Pathogenesis**

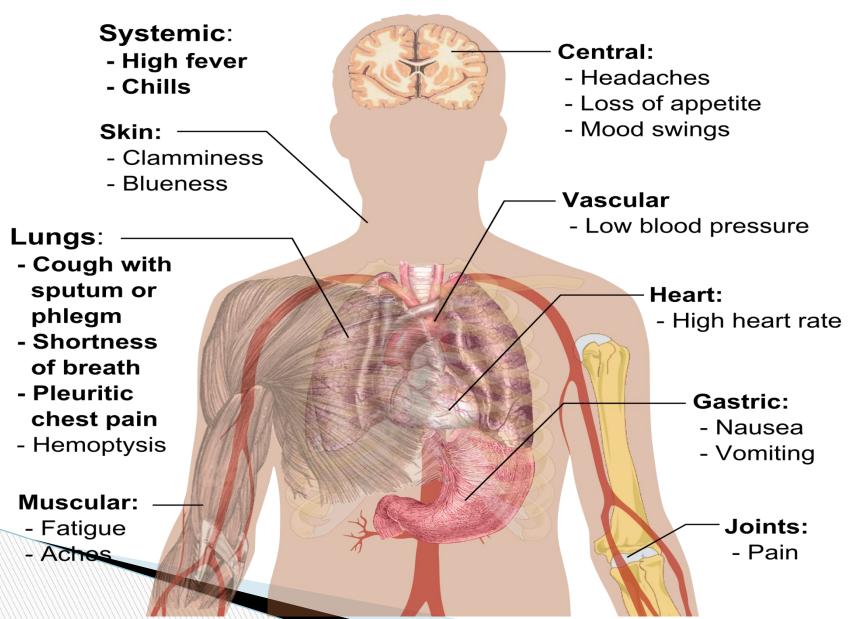

Penetration of pathogens of pneumonia in respiratory departments of lungs

- -bronchogenic
- -hematogenous (in sepsis, endocarditis tricuspid valve)
- aspiration path (swallowing a large amount of vomit.)

## **Clinic**

Main symptoms of infectious

#### Pneumonia

# **Diagnostics**

## Chest X-ray

## Laboratory research

- leukocytosis
- increase in ESR to 20-25 mm / h
- Bhakti increase in CRP and fibrinogen
- Analysis sputum- signs of inflammation (leukocytes)

## Physical exam

- Increased breathing to 25-30 per minute
- Percussion- gain voice tremor
- Auscultation- bronchial breathing, wet finely wheezing

## **Treatment**

- · Antibiotics the main drugs for treatment of pneumonia .
- Oxygen therapy
- · a means of detoxification
- Symptomatic therapy: fever

### **Prognosis**

With treatment, most patients will improve within 2 weeks. Elderly or very sick patients may need longer treatment.
