### la belle epoque:

Henri Poincaré

## Why Poincare?

Polymath

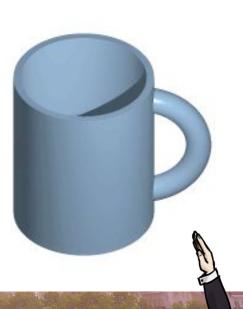

- "The Last Universalist"
  - Algebra

- Geometry
- Physics
- Croissant

# <u>Topology</u>

Poincare is believed to be the developer of the very foundations of topology

> His research led to the abstract topological definitions, basic concepts of combinatoric topology and the famous Euler-Poincare formula:

V - E + F - (L - F) - 2(S - G) = 0

## Algebra and number theory

He also contributed to the theory

of discrete groups and their

representations

It is Poincare who we should

theory a very important

instrument in theoretical

thank for making group

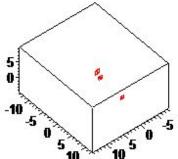

physics

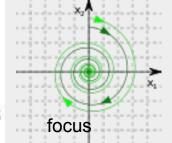

## Astronomy and celestial mechanics

Poincare studied the three-body problem and details of its recently obtained solutions and proved that this problem isn't integrable.

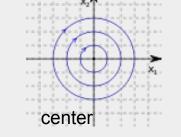

Poincare's ideas later became a base for the mathematical "chaos theory" and general theory of dynamical systems.

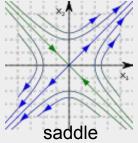

Poincare had defended his doctoral thesis on the study of singular points of the system of differential equations. He classified the singular points and created the asymptoti

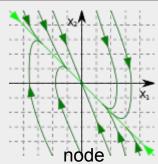

#### analysis of the solutions.

# Poincare made a major contribution to the relativity

 $t' = t - vx/c^2$ 

ict

# **Principles of relativity**

 $\mathbf{R}^{1,3}
ightarrow \mathrm{O}(1,3)$ 

E=mc<sup>2</sup>

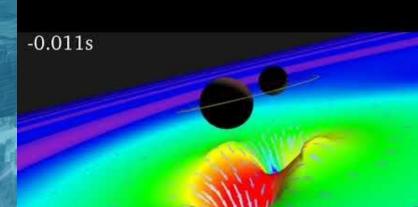

# Supported quantum mechanics And many other things!
