Далее

Land resources

- The land fund of the country is 1707.5 million hectares.
- The land for agricultural use is 132 million hectares.
- But the quality of land is different. Much of the land has low fertility.

Forest resources

Forest resources of the Russian Federation are significant. The forest covered area is about 45% of the total territory of the country.

The raw potential of Russia is formed by coniferous forests (80% of the country's area:

- Spruce
- Fir
- Pine
- Cedar

Water resources

- The water resources of the Russian Federation are 4310 cubic meters. km of them within the country - 4110 cubic meters. km. And comes from the territory of neighboring countries - 200 cubic meters. km. water

Biological resources

- are resources of plants and animals used by man.

Biological resources are divided into two types:

Vegetable world

For Russia, the most typical types of vegetation: tundra, forest, steppe, desert, meadow and marsh.

Animal world

Resources of wildlife - fur-bearing animals, freshwater and sea fish

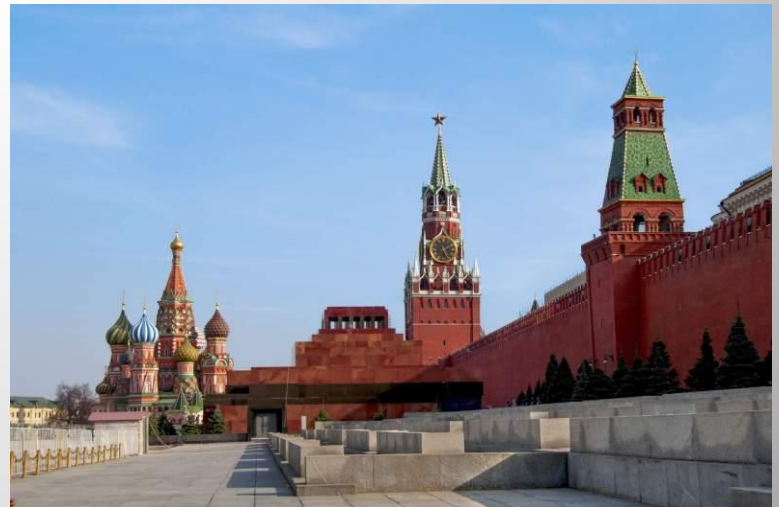

Mineral resources

- this is the rocks and minerals that are used or can be used in the national economy: to generate energy, in the form of raw materials, materials, etc.

Recreational resources

- —These are resources of all kinds that can be used to meet the needs of the population for rest and tourism.

Recreational resources include:

- Natural complexes and their components (relief, climate, water, vegetation, fauna);
- cultural and historical sights;

Russia is very rich in various natural resources, judging by the statistics, they represent rather big numbers. Natural resources of Russia amaze with their diversity.
