

Topic: ecology

Three main problems in ecology

1. air pollution
2. poisoning the land
3. water pollution

air pollution

Life can not exist without **oxygen**.
Living beings use oxygen to produce
energy.

One of the main causes of
air pollution - **industrial
waste incineration.**

How to deal with air pollution?

- Some scientists propose creating flying gardens as a huge octopus.

but it is only fantasy

the air was clean, you must not use the plants, driving cars, and the like. but people can not live like that, so to completely clean the air is almost impossible.

poisoning the land

WE LIVE AND WE GO ON THE GROUND,
SO WE MUST TAKE CARE OF HER.

AS A RESULT OF OUR CURRENT EARTH
IS IN DANGER.

Trash, toxic substances, broken car, discarded bottles. For some types of pollution just not nice to look at.

Farm animals sometimes are injured on the old cans and bottles.

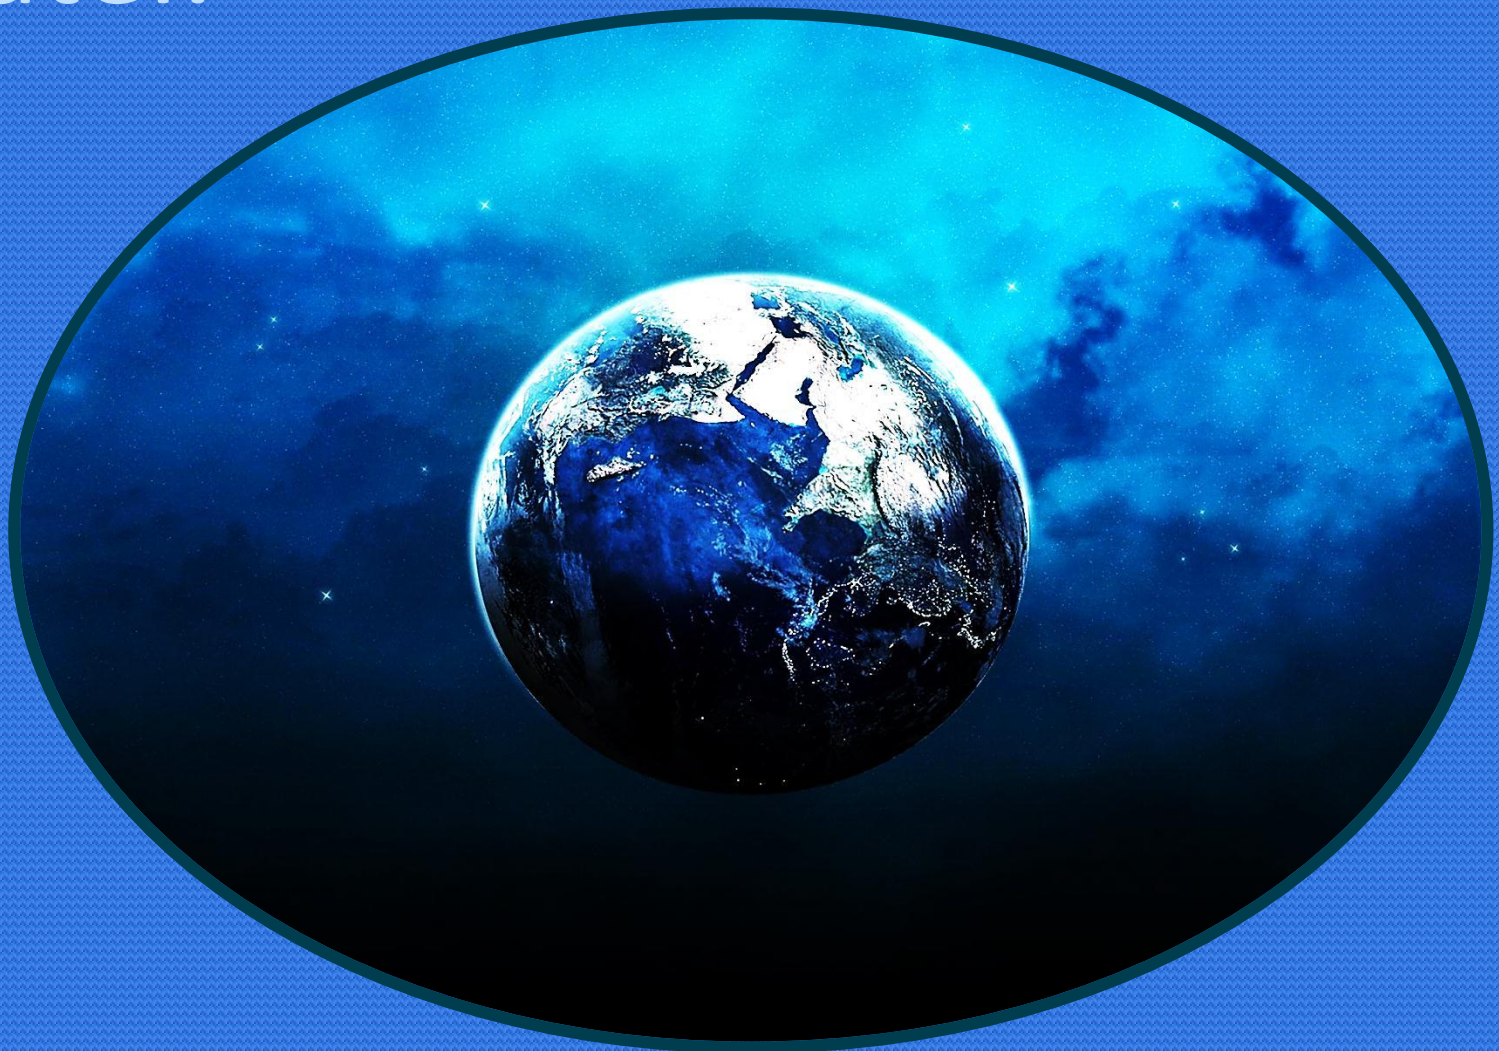

**Young
children can
be injured
when playing
Abandoned
cars.**

We can prevent pollution of land,
leaving garbage in the streets and
trying to persuade others not to.

★water pollution★

75 percent of the Earth is
water.

Some animals live only in water. Fish, crustaceans and even some mammals.

the lives of animals as our dependent
on fresh water.

Water gave life to our planet

that life could develop,
needs a lot of water

but people pollute the water, killing
this life

so we are poisoning ourselves

take care of water, land, and air. Love
and take care of our land, because it is
in our hands

Goodbay !!!
