

AEROPORTI DI ROMA - FIUMICINO

MADE BY NASTYA KLAVKINA

FIUMICINO INTERNATIONAL AIRPORT

Rome–Fiumicino International Airport "Leonardo da Vinci", is an international airport in Rome and the major airport in Italy. It is one of the busiest airports in Europe by passenger traffic with 41.7 million passengers served in 2016. It is located in Fiumicino, 18.9 nautical miles (35.0 km; 21.7 mi) west of Rome's historic city center.

FIUMICINO INTERNATIONAL AIRPORT

The airport serves as the main hub for Alitalia, the largest Italian airline and Vueling, a Spanish low-cost carrier owned by International Airlines Group. Based on total passenger numbers, it is the eighth-busiest airport in Europe and was the world's 47th-busiest airport in 2017. It covers an area of 29 square kilometers and is named after polymath Leonardo da Vinci who, in 1480, designed a flying machine with wings and the first proto helicopter.

HISTORY

- The airport was officially opened on 15 January 1961, with two runways, replacing the smaller Rome Ciampino Airport, which remains in service for some low-cost airlines as well as domestic and charter operations. Despite being officially opened in 1961, Leonardo da Vinci–Fiumicino Airport had actually been in use since 20 August 1960. This was to help relieve air traffic that was congesting Rome Ciampino Airport during the 1960 Summer Olympics.

HISTORY

- During the 1960s, home-carrier Alitalia invested heavily in the new airport, building hangars and maintenance centres; in the same period a third runway was added.

FUTURE PLANS

- Several projects are planned. These include the construction of an environmentally-friendly cogeneration system, which would allow the airport to produce its own energy; construction of Pier C (dedicated to international flights) with 16 additional loading bridges, to handle the expected growth from 38 million passengers per year in 2014 to 55 million by 2018; and the "Masterplan Fiumicino Nord", involving four new terminals and two new runways to be built by 2044, when there are estimated to be 100 million passengers per year.
