Main source of pollution

The main source of environmental pollution is return to the nature of huge mass of waste which are formed in the course of production, transport and consumption in human society. Also and in our village. We have a wastebasket on which residents of the village will take what all stuff is, and I consider it I the most important source of pollution of our village. But there are also pluses. In our village there are any not no plants factories, and close is also not observed though it pleases

Garbage near school there to

hospital and cemetery ■

Unfortunately we see big dumps near school
and hospital, and even at a cemetery.... come
round....

School

Cemetery

Hospital

Uranus

We know that all Kirovohrad region stands on uranium ore, it is necessary mind, as our Adzhamka also is on uranium therefore it is the biggest bad factor in ours environment.

Water pollution

Understand any changes of physical, chemical and biological properties of water in connection with dumping into them of any stuff as pollution of water resources. We have in the village many ponds which are very polluted, and we hope that the present power will bring order to this annoying situation.

Save our beautiful village
