

Qatar education

Qatar is a state in the Middle East, located on the Qatari Peninsula in the north-eastern part of the Arabian Peninsula. It borders with Saudi Arabia in the south, from all other sides it is washed by the Persian Gulf. In the northwest has a sea border with the islands of Bahrain, in the southeast - the sea border with the UAE. The capital is the city of Doha.

1. **Preschool education**
2. **Primary Education**
3. **Middle Education**
4. **Vocational Education**
5. **Tertiary Education**

Preschool education

Qatar children from the youngest age are accustomed to permissiveness, in order to minimize the amount of stress that can occur in the early stages of life.

In kindergartens, children go to bed only when they want it, eat food brought from home, and communicate with other children.

Primary Education

Education in Qatar respects the tradition and conservative nature of its people, while espousing latest technology and pedagogic methods. While the 6 years of primary education are compulsory, all state schooling is free. Unusually, private schools are actively encouraged too, with all costs covered.

Middle Education

Three years of middle school follow, where a standard academic curriculum is followed at all state and private schools.

There are 19 secondary schools for boys, and 22 for girls, as well as a number of private ones of both kinds. The government is experimenting with alternatives to general education, and has recently opened two scientific secondary schools.

Vocational Education

The department of training and vocational development supplies the nation's skilled and semi-skilled requirements.

More recently programs were introduced to train girls in secretarial and general office skills.

Higher education

The primary higher education institution is the University of Qatar established in 1973, and illustrated here. There are two campuses – one for boys and one for girls, and its faculties include administration and economics, education, engineering, humanities and social sciences, science, technology, and shari'a and islamic studies. The medium of instruction is English for natural science, business and engineering programs, and Arabic for the rest.
