

What I Think About Environmental Problems

Who changed the world?
US.

And who changed us ?
The world.

Human is a creature of nature,
in his environment and
developing with it.--Marx

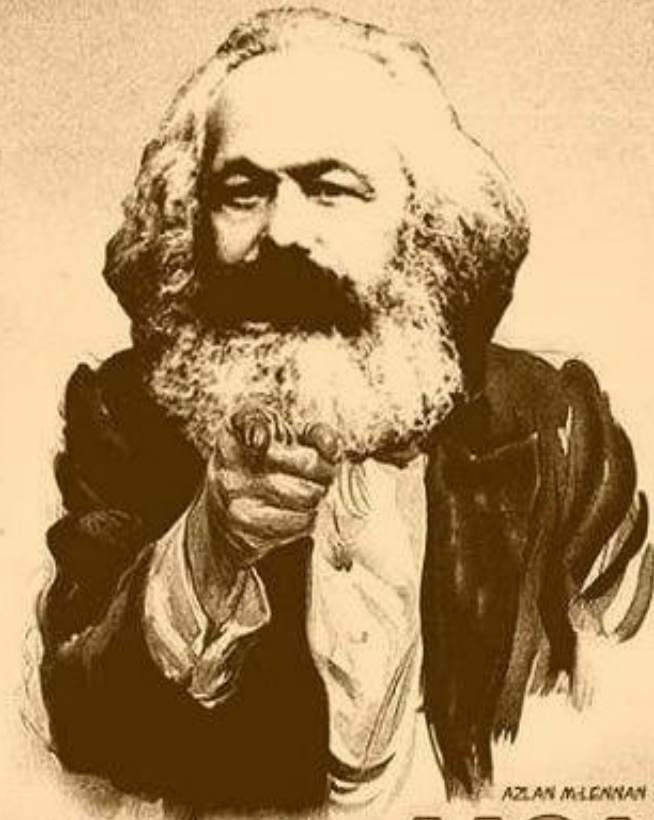

Animals make use of only the external nature and simply cause changes in the natural world through their own existence; and human uses his changes to make nature serve his purpose, to dominate nature.

Let us not revel in our human triumph over nature. For every such victory, nature takes its revenge on us.--Engles

Environmental problems are economic problems and the problems of the mode of production in capitalist society. Ecological environment problems are the problems in the development of social history. Only with the continuous progress of society, in the process of solving social problems, the ecological environment problems can be solved at the same time.

AZLAN MLENNAN - 08 -

**I TOLD YOU
I WAS RIGHT**

ABOUT CAPITALISM

Save the earth
In fact, what we
want to say is
we're saving
ourselves.

There is no
garbage in the
world, we just use
the resources in
the wrong place

И снег, и ветер,
И звёзд ночной
полёт...,
Меня мое
сердце,
В тревожную
даль зовёт.
