

How to help nature

Memo for volunteers from GreenPeace

The problem of pollution in the world

- Pollution - Is the one of the main problems in the world.
- Million of millions living organisms are dying through human activity.
- We need to know some things that can help the environment around us.

Chapter I : Air Pollution

- Air pollution - big problem of productions.
- If we want to stop this ugliness, we need stop use electricity as a energy and replace it with solar energy.

Chapter II : Traffic fumes

- Traffic fumes - real problem of the megacities. In a heavy traffic it is a common thing.
- If we will be used an electric cars, this problem will be solved.

Chapter III : Water pollution

- Water pollution usually is a consequence of work of productions and garbage disposal.
- We must stop water pollution, because many of Marine life is dying in this second.
- We must stop use a cellophane and plastic, because this materials pollute the water. Also, we shouldn't dump production waste into the rivers and lakes.

Conclusion

- We live in a wonderful world, so, let's make it perfectly using a advices of this presentation. Let's help GreenPeace together!
