I. Introduction

1. Kazakhstan - Agricultural land economy
2. Types of farmland

II. Conclusion

III. References

Key words

Agricultural land is typically land devoted to agriculture, the systematic and controlled use of other forms of life—particularly the rearing of livestock and production of crops—to produce food for humans. It is thus generally synonymous with both farmland or cropland, as well as pasture or rangeland.

- 
- Land, In economics, the resource that encompasses the natural resources used in production. Land was considered to be the “original and inexhaustible gift of nature.” In modern economics, it is broadly defined to include all that nature provides, including minerals, forest products, and water and land resources.

Conclution

- Land economics shows that free exchange within a system of private rights leads to inefficient resource allocation
- The economic of land include the question about factor of land, land use, distribution of land etc revenue Economic relations and issues of economic theory
