

Горилла

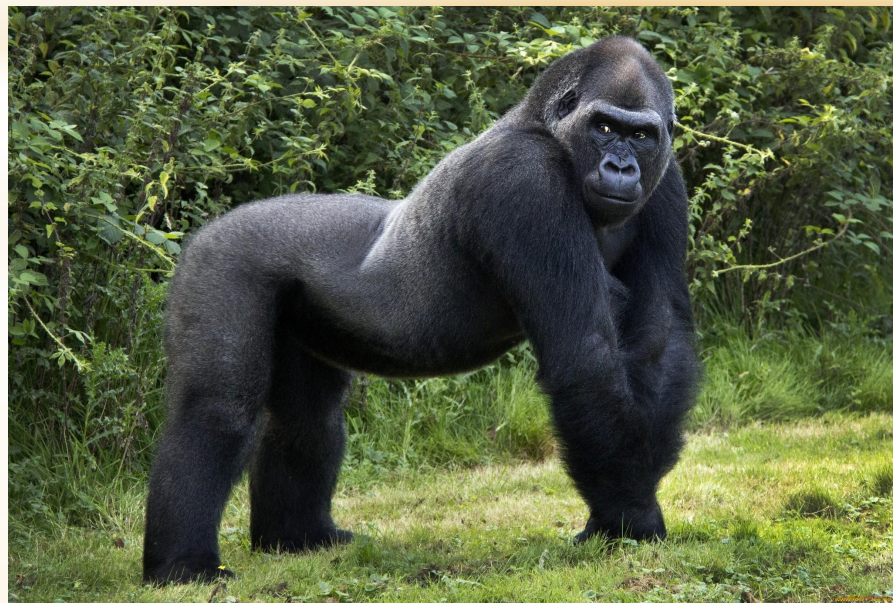

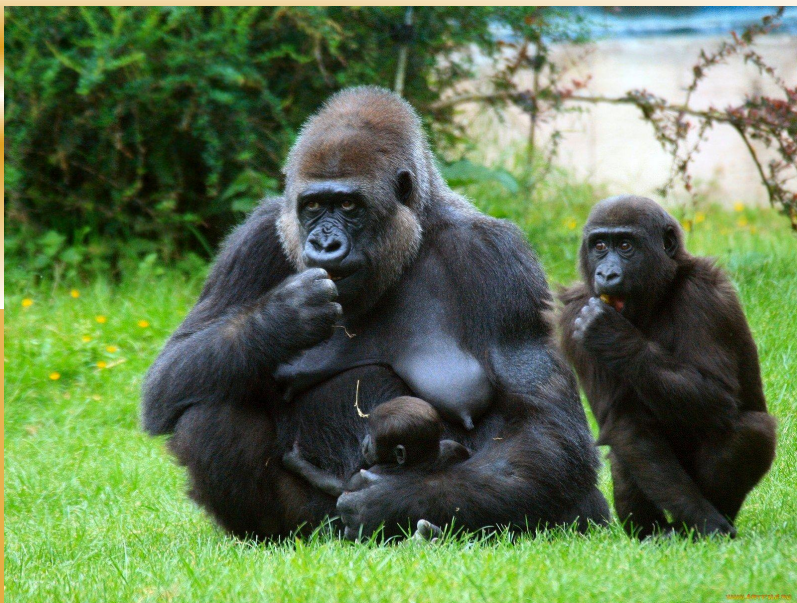

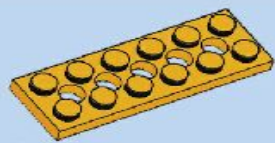

Открытая тема

Горилла - самая крупная человекообразная обезьяна, самцы которой вырастают ростом до 2 м и весом около 3 центнеров. Эта обезьяна обитает стадами в джунглях Экваториальной Африки. Питается сочными ростками, плодами и фруктами, а также птичьими яйцами и насекомыми.

Гориллы признаны очень интеллигентными животными. Они известны своими способами коммуникации и жестами. Некоторые гориллы в зоопарках создают свой язык жестов.

Гориллы близкие родственники человека, у людей с ними 98% одинаковых ДНК.
