

About 150 years ago the air was pure and clean.

Many cities around the world have air polluted with "smog". This is so strong in some places that the air, which should be a beautiful blue, looks brown.

The planet Earth is mostly water. Oceans cover the biggest part of it – and there are lakes, rivers, streams and even water underground. All life on the Earth – from the smallest bug to the biggest whale – depends on the water. It's precious.

Now we are making so much garbage that in many places, there is not enough room to bury it all.

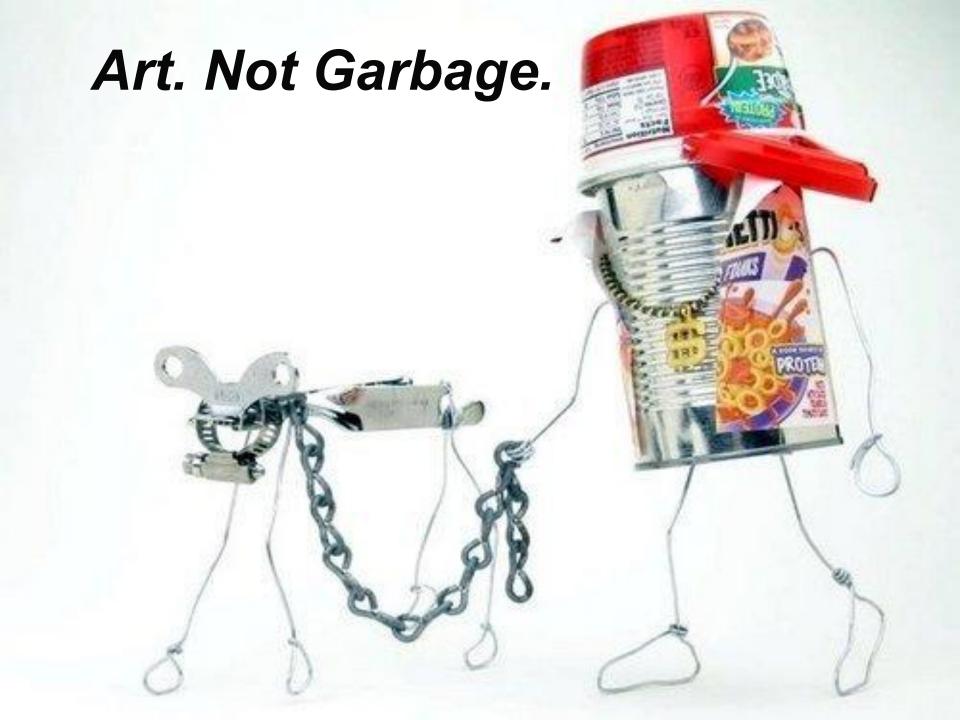

We have to act fast and cut down the amount of garbage we make. Can we do it? You bet!

We can recycle (which means re – using materials instead of throwing them away) and reject (which means not buying things that can't be re – used, like plastic wrapping and other packaging).

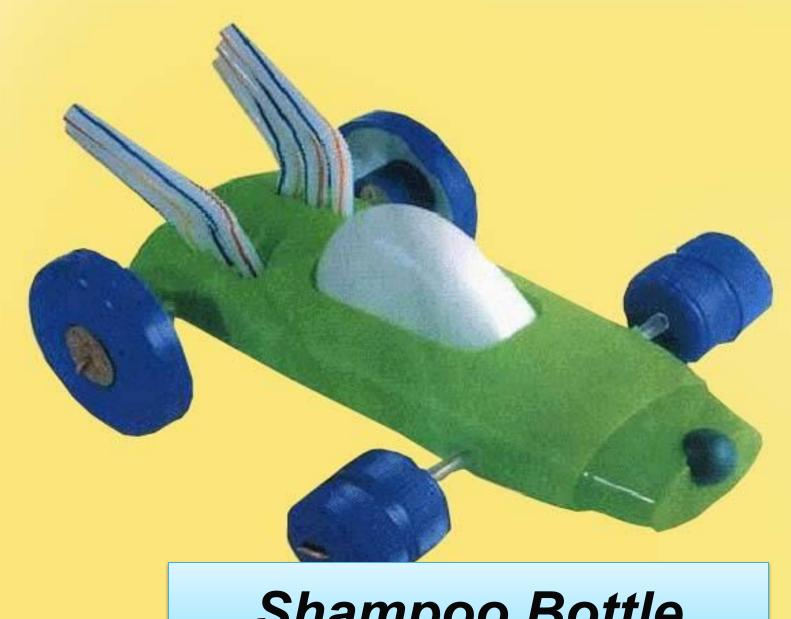

Shampoo Bottle

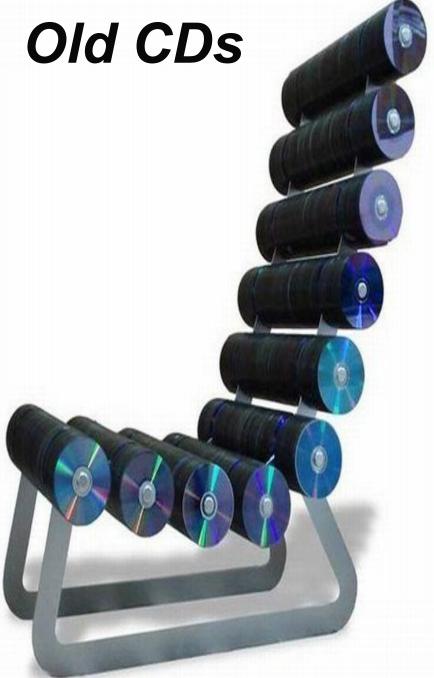

Old jeans

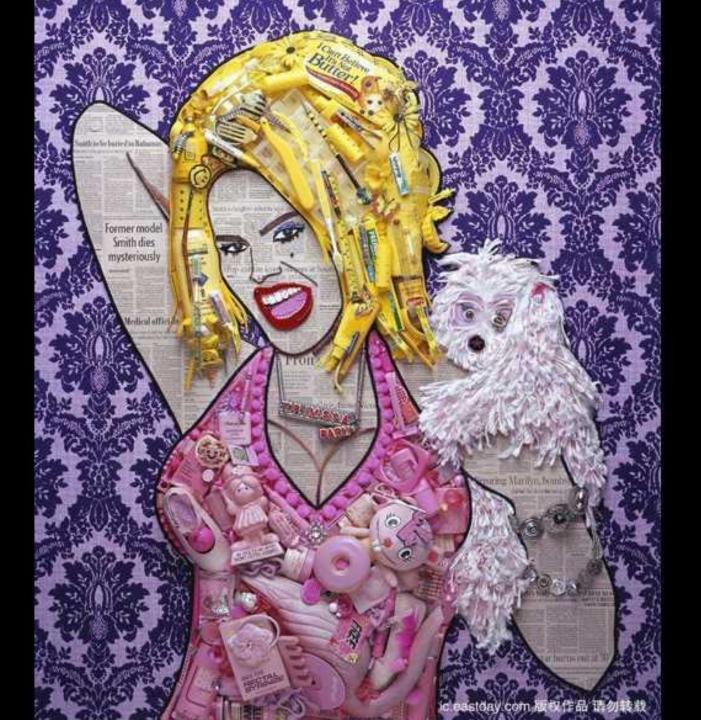

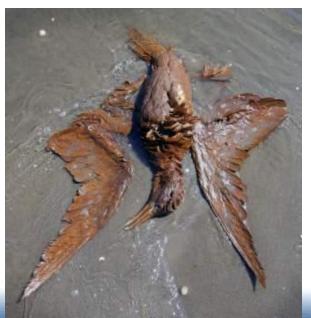

We have to stop this

Stop thinking about this ...

And start thinking about this ...
