

Fire service of Russia

A series of horizontal lines in teal and light blue colors, with varying lengths and slight offsets, creating a modern, layered effect across the middle of the slide.

The fire service is the core of the current structure, which protects each person and community from fires and accidents and disasters. Fire fighting is a war in time of peace, and the profession of firefighter is one of the most dangerous and at the same time the most humane on earth

The development of fire services in Russia occurred during the reign of Peter I. In 1722, was issued several Executive orders to help eliminate fires, particularly when the Admiralty was organized by the permanent fire brigade, which was secured by all of our fire appliances in order to immediately to respond to fires.

Fire protection is a collection created in the established order of management bodies, divisions and associations whose main tasks are:

- organization and implementation of fire prevention;
- rescue people and property in case of fire;
- organization and implementation of firefighting and emergency rescue operations.

Actions to extinguish fires start from the moment of receiving the message on a fire fire protection, are considered complete upon the return of the fire departments on a permanent location and include:

- receiving and processing messages about the fire (call);
- check-out and adherence to fire (call);
- the exploration of space fire;
- the deployment of forces and means;
- rescue work associated with fighting fires;
- the elimination of combustion;
- special works;
- collection and return to the place of permanent location.

FIRE — the uncontrollable burning causing a material damage, harm of life and health of citizens, interests of society and the state.

Causes of fires:

careless handling of fire;

failure to comply with the rules of operation of electrical devices;

spontaneous combustion of substances and materials;

arson;

lightning discharges etc.

FIRE — the uncontrollable burning causing a material damage, harm of life and health of citizens, interests of society and the state.

Causes of fires:

The fire service today is the fastest structure for emergency response. It is the Foundation of modern rescue service. Fire service is fighting fires, it carries out fire supervision and training of the population handling fire. In its Arsenal the most powerful equipment: fire trucks, ships and boats, as well as special helicopters and even trains. Firefighters equipped with the most modern models of gas masks, heat-reflecting suits, smoke extraction installations and many other special devices.

Thank you for attention!
