

Private school in the USA

Student: Gazitdinov Timur

10 A

- Secondary education received in America, is the key to a successful admission to most American universities.

- The system of secondary education in the United States is represented by public and private schools. Last make up just over 10% of the total number of educational institutions.

According the US Department of Education, that private schools offer students the best knowledge of the exact sciences (mathematics, physics, chemistry, biology), and foreign languages.

- In contrast to the government, in private schools, children learn in a few classes - 10-15 people. In such a close environment teacher can fully devote sufficient attention to

- 
- Despite the relatively greater freedom of choice, there are a number of compulsory subjects - mathematics, natural sciences, social sciences, computer literacy and English language. Other items the student chooses their own based on the scope of his interests.

- Physical education is also included in compulsory subjects, however, high school students do not simply "exercise" but to any particular sport.

- 
- After school, students take the exam - SAT, which comes in two stages. First - SAT I - includes verbal and mathematical part. The second, more advanced and complex - SAT II - check the knowledge of the three elective subjects from the list. For admission to most colleges require submission of SAT I, but the most prestigious colleges prefer SAT II.
