Like our BrillKids Slideshows?

You'll LOVE Little Reader!

What Little Reader can do that POWERPOINT SLIDESHOWS cannot:

- Display a different picture each time the same word is played back, giving a better understanding of the meaning of the word.
- Attach pronunciations, pictures and sound effects more easily.
- Easily personalize your lessons with your own pictures, voice recordings and videos
- Switch between different modes of display, such as Word flash, Picture flash, Word + picture/video (for multisensory teaching)
- Change the way each lesson is presented – switch between word colors, font types, and background colors
- Have a large mouse pointer to easily point to the word(s) or different parts of the word(s)
- Lock the mouse and keyboard to prevent your child from interfering with playback
- Have a lesson library that is easily expandable and potentially limitless, with new lessons provided by BrillKids and other users, just a few clicks away
- Keep track of exactly how many times each word has been played
- Edit photos easily (using the built-in Picture Editor) - crop and add arrows, and circles to highlight relevant parts of a picture
- Print out your word library in multiple formats – flash card style, or lift-the-flap multisensory style.
