

The rainforest are dying

Class 6a
Dasha Jakovleva

The rainforests are dying, rare plant and animals species are disappearing, rivers and lakes are polluted. It's time we woke up to these problems and started repairing the damage.

One of the major problems in the South America.
They are home to half the worlds species, and to
millions of people.

Moreover, the rainforests clean the air by absorbing carbon dioxide and giving out oxygen.

The trees are being cut down for paper or to make room for cattle farms.

As a result, birds and animals lose their homes and die.

If we continue to burn the rainforests as we are doing now, the earth will never be the same again.

It is not too late to solve these problems.

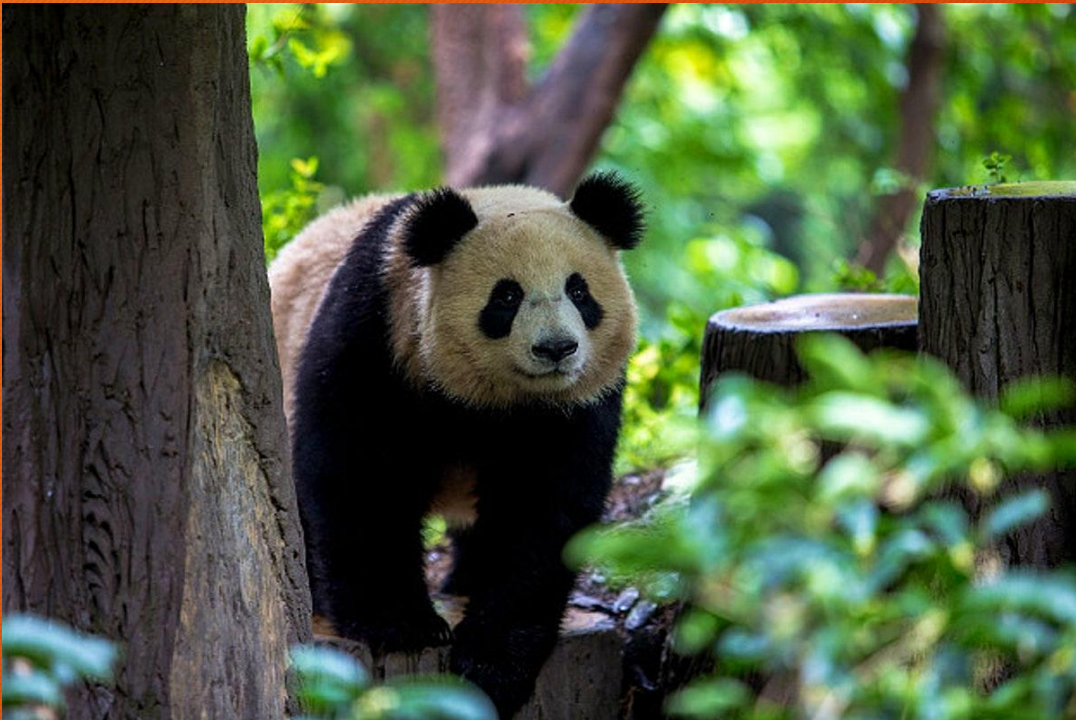

We have the time, the money.

We can plant the trees and adopt animals.

We can create parks for endangered species.

Together we can save our planet.

Thanks for attention
